Philadelphia Refining Complex AOI 4
3144 Passyunk Avenue, Philadelphia, Pennsylvania

Dear Mr. Brown,

On March 24, 2017, Stantec Consulting Services Inc. (Stantec), on behalf of Philadelphia Refinery Operations, a series of Evergreen Resources Group, LLC (Evergreen) submitted the *Remedial Investigation Report* (RIR) for Area of Interest (AOI) 4 at the Philadelphia Refining Complex (the complex). This letter provides responses to Report Comments, dated June 29, 2017, issued by the Pennsylvania Department of Environmental Protection (PADEP) regarding the AOI 4 RIR.

Comment #1: *"Offsite groundwater contamination at the southeast property boundary of AOI 4 has not been delineated. The plume is inferred to extend a significant distance offsite, but no offsite wells were installed. (This was previously noted as a concern in DEP's 25 Feb 2011 comments on the Aug 2005 SCR and a deficiency in DEP's 15 Jan 2014 disapproval of the Oct 2013 RIR.)"*

Response to Comment #1: On June 28, 2017, Stantec provided PADEP with a map of the proposed locations of up to five offsite monitoring wells via electronic mail (**Figure 1**). The proposed well locations were selected based on a telephone discussion between the PADEP, Evergreen, and Stantec on June 26, 2017, during which the extent of offsite delineation of the RIR-modeled groundwater plume was discussed. It was agreed that groundwater data collected from wells installed within the Pennsylvania Department of Transportation (PennDOT) right-of-way would be sufficient to the PADEP for usage in future groundwater fate and transport model calibration for the referenced plume in the unconfined aquifer.

Stantec and Evergreen request that the PADEP provide confirmation that the offsite monitoring well locations proposed on **Figure 1** are satisfactory for delineation purposes.

Comment #2: *"The fate-and-transport modeling indicated a potential benzene plume length of ~900'. Over this distance groundwater flow direction and gradient may vary from the model values. Groundwater flow conditions in the model were limited to data from a single gauging event. Sewer lines at 26th Street and Penrose Avenue may influence groundwater flow."*

**Reference: Response Letter to Remedial Investigation Report Comments
Philadelphia Refining Complex AOI 4
3144 Passyunk Avenue, Philadelphia, Pennsylvania**

Response to Comment #2: Stantec and Evergreen agree that the groundwater flow direction and gradient in the vicinity of the groundwater plume near Penrose Avenue may vary from that utilized in the Quick Domenico model presented in the RIR. However, groundwater data presented in the RIR supports that the gradient and inferred southeasterly flow direction has been relatively consistent since 2014 onsite. The presence or absence of groundwater infiltration into the Penrose Avenue and 26th Street Intercepting Sewers will be evaluated using the offsite monitoring wells at the locations proposed on **Figure 1**.

Comment #3: *"Calibrating the fate-and-transport model with data from a period of active remediation introduces more uncertainty to the results. The concentrations used may not have been conservative relative to the time before remediation, when the plume could have been migrating offsite. For instance, concentrations at RW-703 before the Penrose system came online were ~16,000 µg/L, and concentrations at downgradient RW-708 were 7,400 µg/L. With other parameters the same as in Stantec's model, the estimated model plume length would be ~1200'."*

Response to Comment #3: Stantec and Evergreen agree that operation of the Penrose Remediation System since early 2013 may have influenced benzene concentrations in the unconfined aquifer. Prior to commencement of total fluids recovery, the benzene plume may have been approaching a steady-state condition based on a lower rate of transport decay and/or dispersion, which could have resulted in a longer plume attenuation length (such as from the example data provided in the comment above). Addition of the offsite monitoring wells, groundwater data to be collected from these wells, and simulation of the plume using a groundwater numerical model more capable of accounting for the variability in local aquifer conditions should provide a better understanding of the potential extent of groundwater contamination near the Penrose Remediation System plume.

Comment #4: *"Benzene at S-369 is ~2000 µg/L. This well is in the northeast corner of AOI 4, adjacent to the 26th Street property line. Offsite wells to the northeast of S-369 (ARCO-1 and ARCO-2) show elevated concentrations. DEP recommends that Evergreen install and sample offsite wells to the east and southeast of S-369. This work should be part of the site-wide fate-and-transport study. The property on the east side of 26th Street is developed."*

Response to Comment #4: Based on the well gauging data and interpolations presented in the RIR for Figures 5-2 through 5-4, the pattern of groundwater flow in the unconfined aquifer in the vicinity of monitoring well S-369 indicates convergence along 26th Street. The pattern supports that the 26th Street Intercepting Sewer is inherently leaky along this section of the sewer and that the sewer is an exit point for groundwater on both sides of 26th Street. At the neighboring ARCO property, the inferred groundwater flow direction is from the east. The developed property on the southeastern corner of 26th and Hartranft Streets is a former Ryder LC facility (Ryder). **Figure 2** presents a contour map of groundwater gauging data for June/July of 2008 for the complex, former Ryder property (ROUX, 2008), and the Defense Supply Center Philadelphia (DSCP; Tetra Tech, 2008). This map indicates that a similar groundwater flow pattern was present in 2008 and has persisted through time in an area where several potential sources of groundwater

August 30, 2017

Philadelphia Refining Complex AOI 4
3144 Passyunk Avenue, Philadelphia, Pennsylvania**

contamination have existed. For that reason, Stantec and Evergreen are of the opinion that additional monitoring wells are not needed in the area south and east of AOI 4 at this time.

Comment #5: *"As previously mentioned, DEP is willing to assist Evergreen by contacting PennDOT and other property owners to request their cooperation with granting offsite access for monitoring well installations."*

Response to Comment #5: Evergreen appreciates DEP's willingness to assist with issues related to offsite access. Evergreen may request that the department intervene with regard to one or more offsite properties in the future if needed.

Comment #6: *"Potential vapor intrusion at 3401 South 26th Street (at Hartranft Street) should be evaluated."*

Response to Comment #6: The 3401 South 26th Street property is the previously mentioned former Ryder facility which was in the Storage Tank Corrective Action Program (PADEP Facility ID No. 51-43773). Groundwater gauging data for the site is presented in a Site Characterization Report and Remedial Action Plan submitted in 2008 and a Remedial Action Completion Report submitted in 2009. These gauging data indicate a minimum depth to water measurement of 22.20 feet (ft) below the top of casing. Assuming the wells were constructed with a 3-ft long stickup standpipe, which is unlikely due to the urban commercial setting, a minimum depth to water from ground surface would be approximately 19 ft. Evergreen reviewed this information with respect to the vertical proximity distances established in the *Land Recycling Program Technical Guidance Manual for Vapor Intrusion into Buildings from Groundwater and Soil under Act 2* effective in January 2017. Groundwater at the Ryder property is outside of the petroleum hydrocarbon proximity distances for dissolved-phase constituents (5 ft) and separate phase liquids (15 ft). Additionally, patterns of groundwater flow in the area do not support migration of impacted groundwater from AOI 4 across the 26th Street Intercepting Sewer as illustrated in **Figure 2** and in contour figures presented in the AOI 4 RIR. The only preferential pathways that could act as a conduit for migration of volatiles originating from AOI 4 of which Evergreen is aware are the Pollock Street/Packer Avenue Sewer and the 26th Street Intercepting Sewer. Evergreen operates the 26th Street and Packer Avenue Sewers Biofilter System (Point Breeze Biofilter System) which ventilates these sewers and renders the pathway for hydrocarbon vapors to potential receptors incomplete.

Comment #7: *"Please document conditions at the time of air sampling, including indoor and outdoor temperatures, weather conditions (e.g., wind, precipitation, barometric pressure changes), and building characteristics (HVAC operation, ventilation, etc.)."*

Response to Comment #7: A summary of conditions at the time of air sampling, as available through sampling records, is presented in **Table 1**. Evergreen will present similar summaries for air sampling events in future Act 2 deliverables.

August 30, 2017
Page 4 of 6

Reference: Response Letter to Remedial Investigation Report Comments
Philadelphia Refining Complex AOI 4
3144 Passyunk Avenue, Philadelphia, Pennsylvania

Comment #8: *"As noted in the report, some reporting levels in the indoor air sample analyses exceeded applicable screening values. If Evergreen will be using risk-based screening values rather than occupational criteria (PELs), then those exceedances will need to be addressed."*

Response to Comment #8: Evergreen will address instances in which the reporting limits exceed the applicable screening values in a future Act 2 deliverable.

Comment #9: *"DEP recommends that Stantec and Evergreen obtain the full analytical data packages for indoor air sampling and report the MDLs and the PQLs pursuant to §250.4(c)(2). For example, some nondetect results for 1,2-dibromoethane and naphthalene exceeded screening values. If the PQLs are greater than the screening values, then these exceedances would not be a concern. To attain a standard, concentrations for screening are not required to be less than PQLs (§250.701(c))."*

Response to Comment #9: Evergreen will obtain full analytical data packages and will evaluate whether PQLs are greater than the screening values.

Comment #10: *"The results of the outdoor air testing were not discussed in terms of how they will be evaluated, such as in a risk assessment."*

Response to Comment #10: Outdoor air results will be considered in a future Act 2 deliverable. Evergreen has not yet determined how these data will be used, but is currently performing a risk assessment.

Comment #11: *"For future outdoor air sampling, DEP recommends the collection of a sample at an upwind location for context."*

Response to Comment #11: If during future air sampling events, Evergreen can determine that wind direction is likely to remain consistent through the sampling event, an upwind sample will be collected.

Comment #12: *"It would be helpful to show groundwater elevations in the Figures 2-5 – 2-8 stratigraphic profiles."*

Response to Comment #12: Updated versions of AOI 4 RIR Figures 2-6 through 2-8 (Stratigraphic Profiles C – C', F – F', and G – G') have been provided as **Figures 3** through **5** of this response letter. Updates include the addition of May 2016 water-level elevation markers, the May 2016 interpolated water-table and lower aquifer potentiometric surfaces that were presented as contours in Figures 5-4 and 5-7 of the RIR, and addition of a legend. Stratigraphic Profile C – C' was also updated to include well construction information.

Comment #13: "As noted in past RIR comments, a PaGWIS radius search does not generally include all wells in the database because many wells do not have latitude/longitude coordinates (Appendix N)."

Response to Comment #13: On July 31, 2017, Stantec conducted a one-mile radius search from the AOI 4 boundary in the PaGWIS online database (**Figure 6**). All search results, including those without latitude/longitude coordinates, are provided in **Table 2**. As part of the Cleanup Plan, Evergreen will evaluate these results to determine if potential groundwater receptors are present within the search radius.

Please let us know of any questions or additional comments you may have.

Notes:
1. Well Search completed by Stantec on July 31, 2017, using the Pennsylvania Department of Conservation and Natural Resources, Groundwater Information System (PAGWIS) (April 2016) (Website: <http://www.dcnr.state.pa.us/topogeo/groundwater/pagwis/index.htm>).
2. All records generated from the search were from County of Philadelphia, in Philadelphia Municipality, and within the Philadelphia USGS Quadrangle.
3. The Saltwater Zone criteria did not have positive results; therefore, the criteria is not shown on this table.

4. Former Ryder facility (PADEP Facility ID No. 51-43773) monitoring well locations were digitized on-screen by Stantec using a georeferenced copy of Figure 5 from the August 8, 2008 Site Characterization Report and Remedial Action Plan prepared by ROUX Associates, Inc.
5. Contours presented in this figure are based on interpolation (kriging) of well gauging data from three properties over the span of approximately one month, including the PES Refining Complex (6/3/2008), former Ryder facility (July 1, 2008), and the former Defense Supply Center Philadelphia (6/23/2008).
6. NAVD 88 = North American Vertical Datum of 1988
