**Re: PFAS Soil Sampling Results  
Former Philadelphia Refining Complex  
3144 W. Passyunk Avenue, Philadelphia, Pennsylvania**

Dear Ms. Strobridge:

In June 2022, Sanborn Head & Associates (Sanborn Head) completed soil sampling at one hundred twenty-six locations across Area of Interest (AOI) 1, AOI 2, AOI 3, AOI 5, AOI 6, AOI 7, AOI 9 and AOI 10 for per- and polyfluorinated alkyl substances (PFAS) in accordance with the May 6, 2022, PFAS Soil Sampling Workplan. The results of the PFAS soil sampling are below Statewide Health Standard (SHS) Medium Specific Concentrations (MSCs) in all one hundred twenty-six locations sampled.

Please see the attached memorandum from Sanborn Head that presents more detail on the June 2022 PFAS soil sampling results.

If you have any questions regarding this submittal, please do not hesitate to contact me at your convenience.

Regards,

Evergreen Resources Management Operations

Tiffani L. Doerr, P.G.

## MEMORANDUM

**To:** Tiffani Doerr, P.G. – Evergreen Resources Management Operations  
**From:** Andrew Buchy and Colleen Costello (Sanborn Head & Associates, Inc.)  
**File:** 4796.01  
**Date:** September 27, 2022  
**Re:** June 2022 PFAS Soil Sampling Results  
**cc:** Scott Cullinan – Evergreen Resources Management Operations

---

This memorandum presents the results of the June 2022 soil sampling event at the former Philadelphia Refinery site (Site) in Philadelphia, Pennsylvania for per- and polyfluorinated alkyl substances (PFAS).

### 1.0 INTRODUCTION

At the request of the Pennsylvania Department of Environmental Protection (PADEP), soil samples were collected for PFAS analyses at the Site. One hundred twenty-six soil samples were collected in accordance with the PFAS Soil Sampling Workplan for PFAS submitted by Evergreen to the PADEP on May 6, 2022 (**Attachment A**). The PFAS sampling activities are being completed at the request of the PADEP but are not part of Evergreen's Act 2 investigation and reporting for the Site.

### 2.0 PFAS IN GROUNDWATER RESULTS

Groundwater sampling for PFAS was conducted by Evergreen in the lower aquifer in July 2021 and in the shallow aquifer in January 2022. The lower aquifer sampling resulted in eight of the twenty-nine monitoring wells above PADEP non-residential statewide health standard (SHS) medium specific concentrations (MSCs). The shallow aquifer sampling resulted in twelve of the forty-two monitoring wells above SHS MSCs. The wells above SHS MSCs are identified on **Figure 1**.

### 3.0 JUNE 2022 PFAS SOIL SAMPLING METHODOLOGY

The soil locations for this event were selected based on the following rationale:

- The results of the July 2021 PFAS sampling event in the lower aquifer wells.
- The results of the January 2022 PFAS sampling event in the shallow aquifer wells.
- The locations of the potential Aqueous Film Forming Foam (AFFF) release areas identified in Evergreen's June 30, 2021 Desktop Review and Sampling Plan (DRSP) (**Attachment B**).

**Figure 1** depicts the potential AFFF release areas identified during the desktop review. **Figure 1** also includes the PFAS results from the shallow and lower aquifer monitoring well sampling events as described in Section 2.0. Where necessary, the identified sample location was relocated away from impervious features to facilitate field collection of the samples.

From June 20 to June 30, 2022, Sanborn Head collected 126 soil samples from a depth of 0 to 1-foot below ground surface (bgs) in accordance with the May 6, 2022 sampling plan. The PFAS soil samples were collected in accordance with the PFAS field procedures included in **Attachment A**. The PFAS sampling procedures were developed to avoid potential PFAS cross-contamination from the sampling equipment and materials. The samples were analyzed for the Unregulated Contaminant

Monitoring Rule (UCMR) 3 list of PFAS compounds that include PFOA, PFOS, Perfluororononanoic Acid (PFNA), Perfluorohexanesulfonic Acid (PFHxS), Perfluoroheptanoic Acid (PFHpA), and Perfluorobutanesulfonic Acid (PFBS) consistent with the shallow and lower aquifer groundwater sampling analyses.

For soil sample collection, a non-dedicated stainless steel hand auger was advanced to a depth of 1-foot bgs at each location. Recovered soil from the hand auger was transferred onto PFAS-free plastic sheeting which was used to prevent contact with potentially contaminated soil and other surfaces. Collected soil was then transferred into one, 4-ounce (oz) high-density polypropylene (HDPE) jar. The jars were labeled and immediately stored on ice within a cooler. The required information for each sample was recorded on a chain-of-custody form. After sampling each location, non-dedicated sampling equipment, such as the stainless-steel hand auger, was thoroughly washed in a Liquinox and deionized water solution and rinsed with laboratory-provided PFAS-free water.

Quality Assurance/Quality Control (QA/QC) samples collected during the June 2022 sampling event included four field duplicates, six field blanks, and one equipment rinsate blank. For the four field duplicate samples, an additional 4-oz jar was collected concurrently from sampling locations AOI1\_B010, AOI6\_B035, AOI7\_B002, and AOI9\_B014. Six total field blanks were collected by transferring PFAS-free water into two, 250 milliliter (ml) HDPE bottles while on-site. One total equipment rinsate blank was collected by pouring PFAS-free water through the non-dedicated sampling equipment into two, 250 ml HDPE bottles. All QA/QC samples were documented and handled in the same manner as the soil samples.

All samples from the June 2022 sampling event were submitted to SGS, Inc. (NELAP Identification Number 68-00408) located in Orlando, Florida for analysis of Unregulated Contaminant Monitoring Rule (UCMR) 3 via USEPA Modified Method 537.1 Isotope Dilution. Analytes on the UCMR 3 list of PFAS compounds include PFOA, PFOS, PFNA, PFHxS, PFHpA, and PFBS.

#### **4.0 ANALYTICAL RESULTS FROM JUNE 2022 SOIL SAMPLING**

The current PADEP non-residential SHS MSCs for soil are:

Analyte	PADEP SHS MSC (mg/kg) Non-Residential Surface Soil
PFOA	64
PFAS	64
PFBS	960

Notes:

mg/kg = milligrams per kilogram

The results of the June 2022 sampling event are summarized on **Table 1** and shown on **Figures 2 through 8**. **Figure 2** shows the historical fire activity onsite from the June 30, 2021 DRSP, the sampled shallow and lower aquifer wells, and soil location PFAS results by color dots. The green symbol at a soil sampling location on **Figure 2** indicates that the sample had at least one of the analyzed PFAS substances at a concentration higher than laboratory detection limits but below the applicable MSC and a gray dot indicates that all results were below laboratory detection limits. **Figures 3 through Figure 8** presents the data in databox format. Analytical data packages are included in **Attachment C**.

These results are also summarized below:

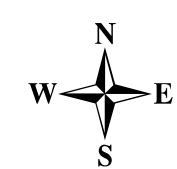

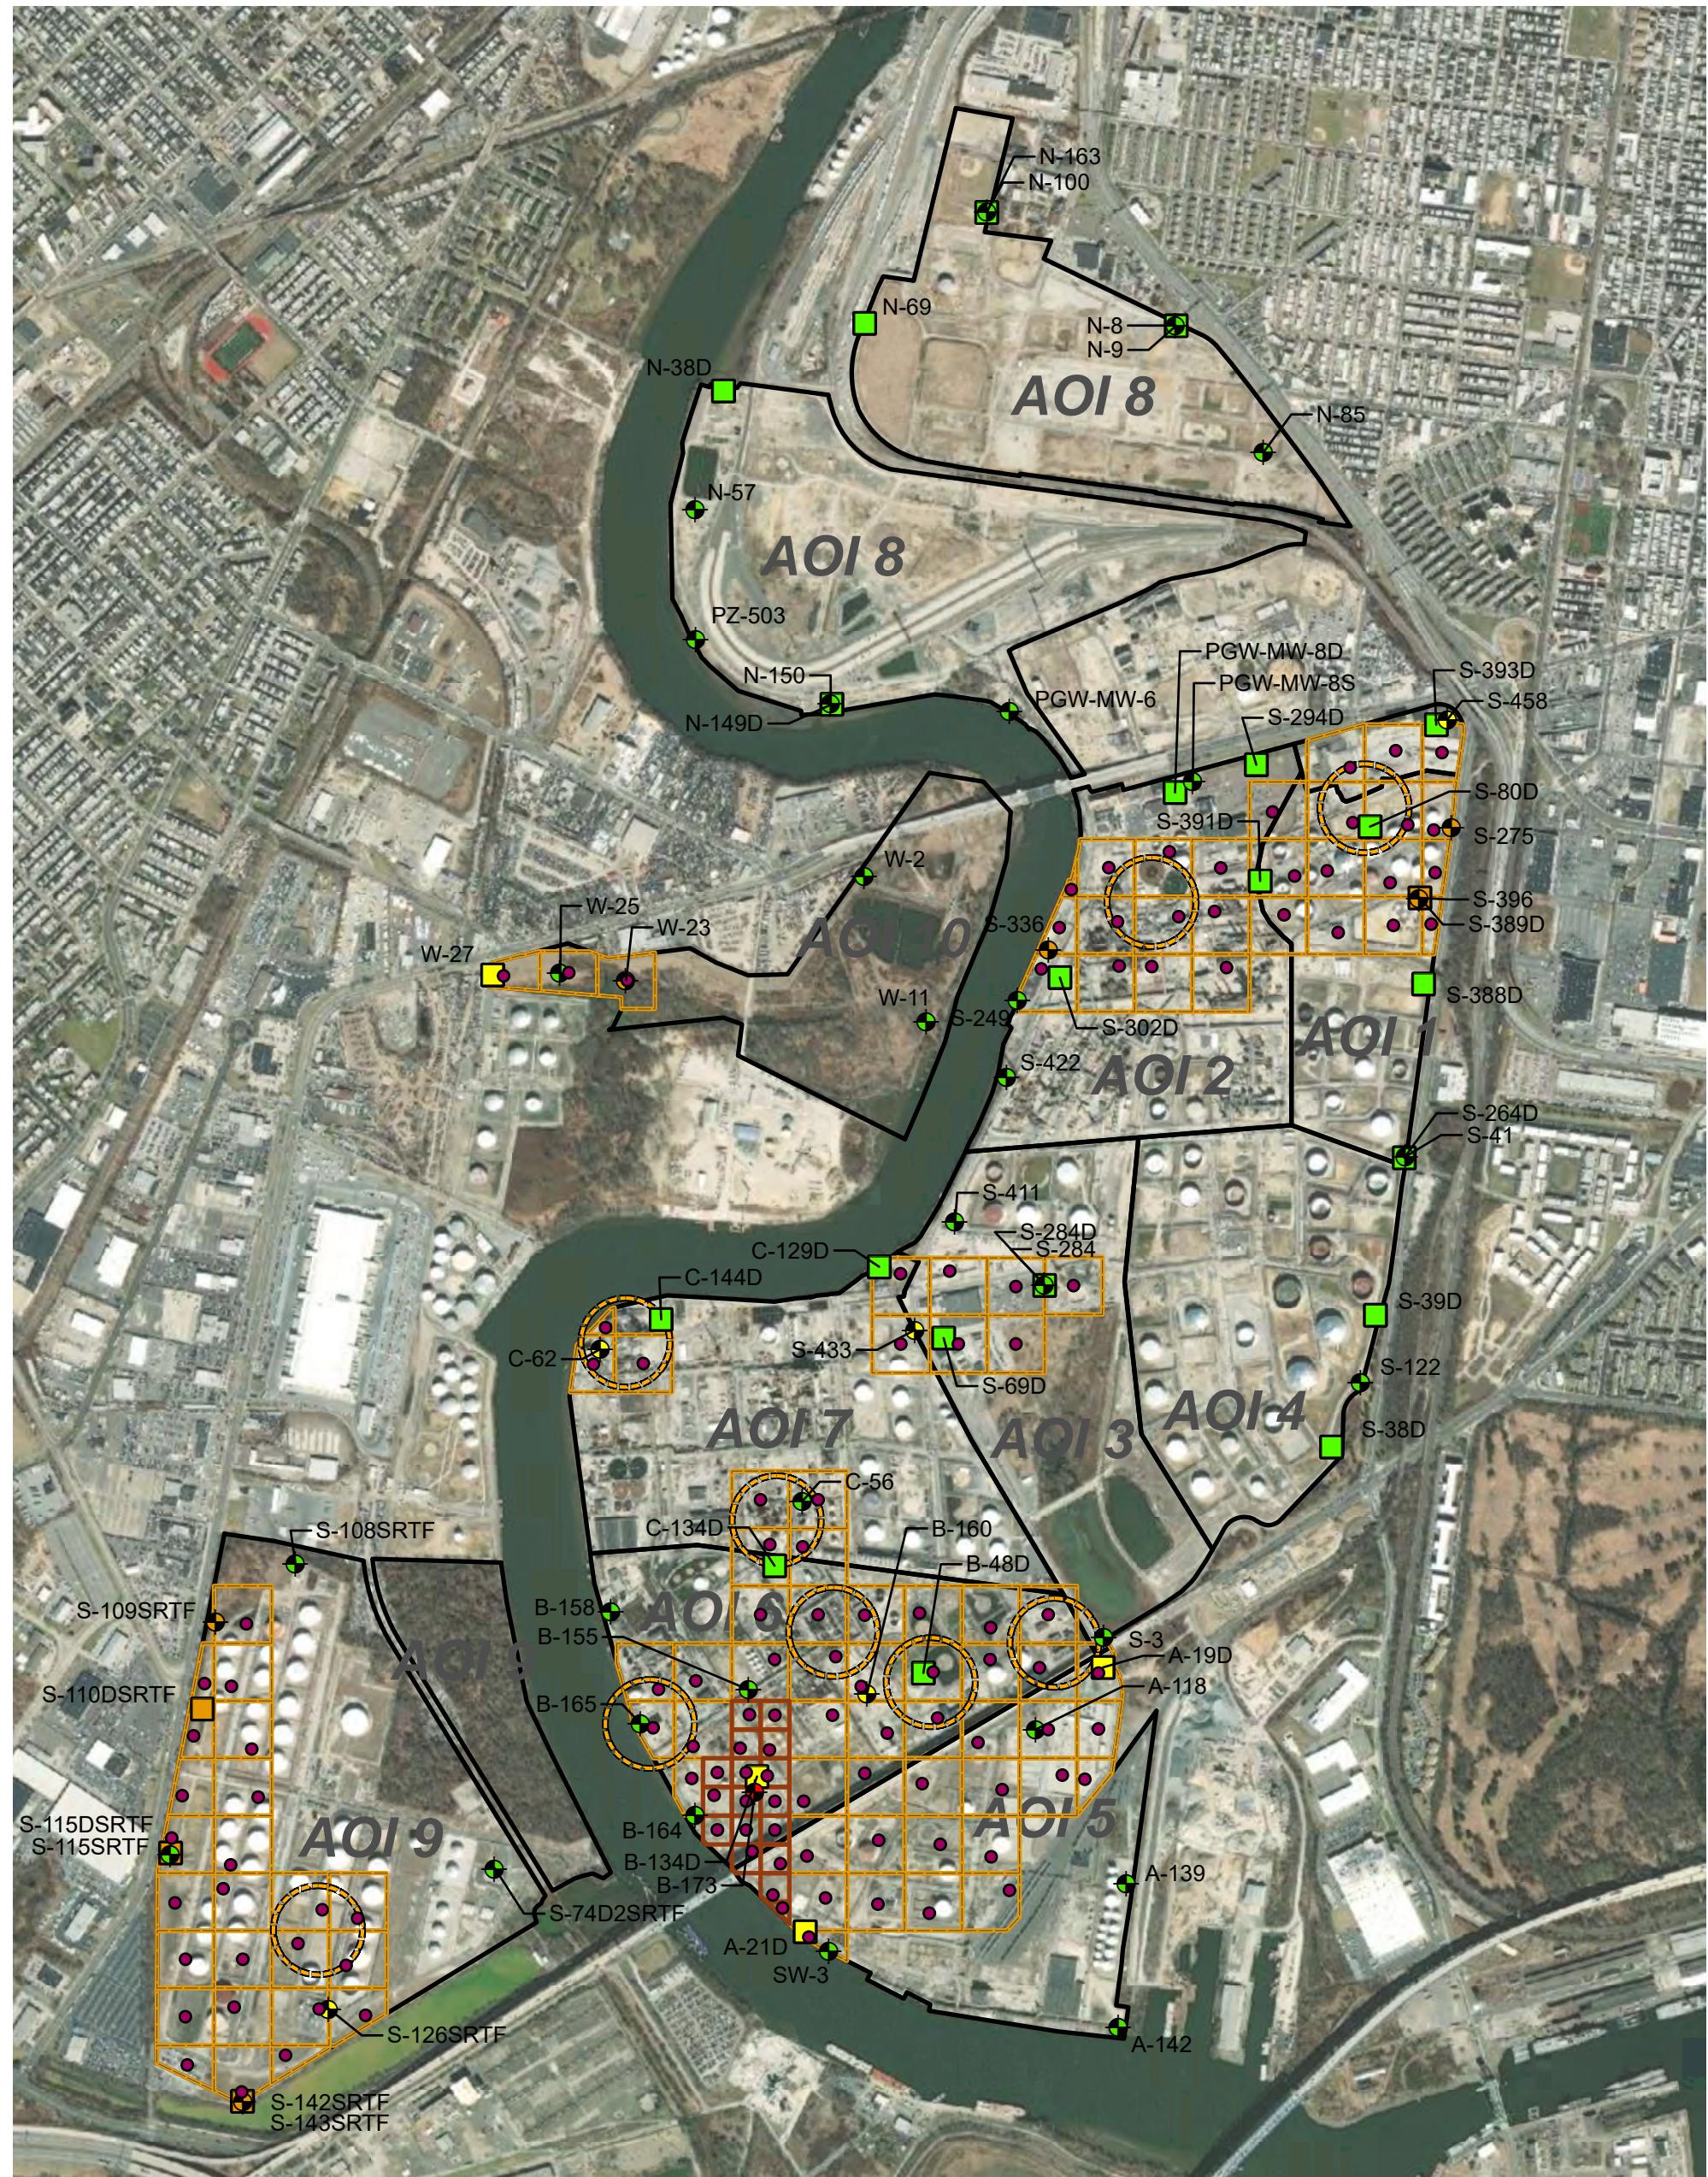

- All soil samples collected had concentrations below the SHS MSCs for PFOA, PFAS and PFBS.
- Thirty-eight of one hundred twenty-six samples had no detections for any of the analyzed compounds.
- Ninety-five of one hundred twenty-six samples had no detections for PFOA.
- Fifty-one of one hundred twenty-six samples had no detections for PFOS.
- No samples had detections for PFBS.
- One hundred fourteen of one hundred twenty-six samples had no detections for PFHpA.
- One hundred fourteen of one hundred twenty-six samples had no detections for PFHxS.
- Sixty-five of one hundred twenty-six samples had no detections for PFNA.
- All QA/QC samples had no detected concentrations of PFAS.

## 5.0 CLOSING

One hundred twenty-six soil samples were collected across AOI 1, AOI 2, AOI 3, AOI 5, AOI 6, AOI 7, AOI 9, and AOI 10 based on proximity to historical fire activity areas and proximity to shallow and/or lower aquifer wells with PFAS results above SHS MSCs for groundwater. All sample results were below applicable SHS MSCs for PFAS and limited detections were noted for PFAS compounds without MSCs. Based on the results of the June 2022 soil sampling event, there is no observed correlation with the PFAS compounds detected in groundwater or the potential sources of PFAS identified in Evergreen's DRSP.

## Notes:

1. Samples were collected by Sanborn, Head & Associates, Inc. personnel on the dates indicated and analyzed by SGS North America, Inc. (SGS) of Orlando, Florida for per- and polyfluorinated alkyl substances (PFAS) compounds by United States Environmental Protection Agency (USEPA) Method 537 (modified) with isotope dilution.

2. Concentrations are presented in milligrams per kilogram (mg/kg), unless otherwise noted.

3. PADEP medium-specific concentrations (MSCs) for organic regulated substances in surface soil (0-2 feet) from Appendix A, Table 3 (<http://www.pacodeandbulletin.gov/Display/pabull?file=/secure/pabulletin/data/vol50/50-7/238.html&d=reduce>).

4. Perfluorobutanesulfonic Acid (PFBS)

5. Perfluoroheptanoic Acid (PFHpA)

6. Perfluorohexanesulfonic Acid (PFHxS)

7. Perfluorononanoic Acid (PFNA)

8. Perfluorooctanesulfonic Acid (PFOS)

9. Perfluorooctanoic Acid (PFOA)

10. "EB" indicates equipment blank

"FB" indicates field blank

"FD" indicates field duplicate of parent sample

"N" indicates normal sample

"QA/QC" indicates Quality Assurance/Quality Control

**Re: PFAS Soil Sampling Workplan  
Former Philadelphia Refining Complex  
3144 Passyunk Avenue, Philadelphia, Pennsylvania**

Dear Ms. Strobridge:

At the request of the Pennsylvania Department of Environmental Protection (PADEP), Evergreen Resources Management Operations (Evergreen) completed lower aquifer groundwater sampling in July 2021 and shallow aquifer sampling in January 2022 for per- and polyfluoroalkyl substances (PFAS) at the former Philadelphia Refinery (Site). The results of the lower aquifer sampling were discussed with the PADEP and the United States Environmental Protection Agency (USEPA) on September 1, 2021, the City of Philadelphia (City) on September 14, 2021, and sent to the PADEP on September 30, 2021. Shallow aquifer sampling results were sent to PADEP on April 11, 2022.

The PADEP has also requested that Evergreen collect soil samples from the Site for PFAS analyses. To address this request, Evergreen is proposing to complete the following tasks.

**Task 1** – Prepare a soil sampling workplan, contained herein, to evaluate potential PFAS impacts in soil at Site.

**Task 2** – If requested, Evergreen will convene a meeting to discuss with the PADEP and EPA the proposed soil sampling workplan. A specific date will be chosen based on availability (anticipated in May 2022, if needed).

**Task 3** – Perform soil sampling for PFAS at the Site in accordance with the agreed upon workplan. Sampling is proposed for a two-week period in June 2022, as noted in Section 2.0.

**Task 4** – Submit the soil sampling PFAS results to the agencies, anticipated to be August 2022.

**Task 5** – Review soil sampling PFAS results with the PADEP and EPA upon submittal.

The workplan below presents the locations selected for soil sampling, the proposed sample collection methodology, and the proposed analytical approach.

## **1.0 PROPOSED SAMPLING PLAN**

The proposed approach is to investigate PFAS in soil with respect to potential Aqueous Film Forming Foam (AFFF) release areas based on the results of the June 2021 desktop review<sup>1</sup>, the results of the PFAS sampling in the lower aquifer wells during the July 2021 sampling event, and the shallow aquifer wells during the January 2022 sampling event.

The following areas where firefighting foam may have been previously used and stored at the Site were identified in the desktop review:

1. Fire Training Areas
2. Past Fire Locations
3. Storage/Loading Areas and Fire Stations

**Figure 1** depicts the locations identified during the desktop review where AFFF may have been used at the Site and the shallow and lower aquifer PFAS sampling results. The PFAS sampling results are compared to the Medium Specific Criteria (MSC) for Perfluorooctanesulfonic Acid (PFOS) + Perfluorooctanoic Acid (PFOA). The proposed soil sampling locations have been selected based on where the groundwater PFOA and PFOS results were greater than the MSC in groundwater and where former AFFF may have been used at the Site as the possible source to the groundwater concentrations. The spacing of the samples was based on a 4-acre sampling grid, with a finer 1-acre sampling grid used in areas where groundwater results were greater than 1000 ng/l. Where necessary, the identified sample location was relocated away from existing roads and tank locations in order to facilitate field collection of the samples. A total of 124 surface soil samples, to be collected in the 0 to 1-foot interval are proposed to be collected, as shown on **Figure 1**. The total number of samples by Area of Interest is summarized on **Table 1**.

The PFAS soil samples will be collected in accordance with the PFAS field procedures included in **Attachment A**. The proposed PFAS sampling procedures were developed to avoid potential PFAS cross-contamination from the sampling equipment and materials. The samples will be analyzed for the Unregulated Contaminant Monitoring Rule (UCMR) 3 list of PFAS compounds that include PFOA, PFOS, Perfluorononanoic Acid (PFNA), Perfluorohexanesulfonic Acid (PFHxS), Perfluoroheptanoic Acid (PFHpA), and Perfluorobutanesulfonic Acid (PFBS) consistent with the shallow and deep groundwater sampling analyses. In addition to the 124 surface soil samples, an additional 4 field duplicate, 6 field blank, and 1 equipment blank QA/QC samples will be collected.

## **2.0 CLOSING**

As discussed in Task 2 above, if a meeting is desired by the PADEP or EPA to discuss this PFAS soil sampling workplan, Evergreen suggests the week of May 16, 2022. Evergreen has tentatively scheduled the PFAS soil sampling to occur in early June 2022 in advance of soil movement activities by Hilco Redevelopment Partners.

Regards,

Evergreen Resources Management Operations

## 1.0 SCOPE AND APPLICABILITY

This document provides the field procedures and Quality Assurance and Quality Control (QA/QC) procedures for soil sampling for per- and polyfluoroalkyl substances (PFAS).

## 2.0 LABORATORY REQUIREMENTS

The samples will be analyzed for both linear and branched PFAS isomers using a modified U.S. Environmental Protection Agency (USEPA) Method 537.1 with isotope dilution for the USEPA Unregulated Contaminant Monitoring Rule 3 list (listed below) by a laboratory accredited in accordance with Act 90 of 2002 (27 Pa. C.S. §§ 4101-4113) and 25 Pa. Code Chapter 252. Reporting limits for soil should be 0.5 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ) or lower.

Analytical Parameter	CAS No.	Molecular Formula
Perfluoroheptanoic acid - PFHpA	375-85-9	$\text{C}_7\text{HF}_{13}\text{O}_2$
Perfluorooctanoic acid - PFOA	335-67-1	$\text{C}_8\text{HF}_{15}\text{O}_2$
Perfluorononanoic acid - PFNA	375-95-1	$\text{C}_9\text{HF}_{17}\text{O}_2$
Perfluorobutanesulfonic acid - PFBS	375-73-5	$\text{C}_4\text{HF}_9\text{O}_3\text{S}$
Perfluorohexanesulfonic acid - PFHxS	355-46-4	$\text{C}_6\text{HF}_{13}\text{SO}_3$
Perfluorooctanesulfonic acid - PFOS	1763-23-1	$\text{C}_8\text{HF}_{17}\text{SO}_3$

## 3.0 FIELD QA/QC

The following table provides a summary of QA/QC samples that will be collected in the field and analyzed by the laboratory. PFAS-free water will be supplied by the analytical laboratory for collection of the field blank and equipment blank.

QA/QC Sample Types	Frequency	Description	Sample ID Nomenclature
Field Blank	6 per sample event	Collected by pouring an aliquot of laboratory-provided PFAS-free water into a laboratory-supplied sample container.	FB-##_YYYYMMDD
Field Duplicate	4 per sample event	Collected by filling a second set of laboratory-provided containers at a monitoring location and comparing to parent sample.	AOI#_B###_PFAS_0-1_YYYYMMDD_DUP
Equipment Rinse Blank	1 per sample event	Collected by pouring an aliquot of laboratory-provided PFAS-free water over decontaminated non-dedicated sampling equipment into a laboratory-supplied sample container.	EB-##_YYYYMMDD

Materials that potentially contain PFAS are to be avoided during sampling to avoid sample contamination. The following table provides a summary of items that are likely to contain PFAS (i.e., prohibited items) and the allowable alternatives.

Item Category	Allowable Items	Prohibited Items
Soil Sampling Equipment	<ul style="list-style-type: none"> <li>• Stainless steel (SS) trowel</li> <li>• SS hand auger</li> <li>• SS bowl</li> </ul>	Teflon®, polytetrafluoroethylene (PTFE), ethylene tetrafluoroethylene (ETFE), Viton®, perfluoroalkoxy (PFA) coating, and other fluoropolymer containing materials.
Decontamination	Alconox® and/or Liquinox®, deionized rinse, and a final PFAS-free water rinse.	Decon 90.
Sample Storage and Preservation for Groundwater/Aqueous/Soil:	Laboratory-provided sample container (HDPE or polypropylene bottles), regular ice in re-sealable plastic bags. After sampling, containers will be stored individually in re-sealable plastic bags.	LDPE or glass bottles, PTFE- or Teflon®- lined caps, chemical ice packs. Samples cannot be field filtered due to potential PFAS adsorption onto the filter.
Field Documentation	Plain paper, metal clipboard, Sharpies®, pens.	Waterproof/treated paper or field books, plastic clipboards, non-Sharpies® markers, Post-It®, and other adhesive paper products.
Field Clothing	<p>Well-laundered (more than six times washed after purchase) clothing made of synthetic or cotton material, no fabric softener.</p> <p>Polyurethane and wax coated materials.</p> <p>Boots made with polyurethane and PVC, well-worn or untreated leather boots.</p> <p>PFAS-free Tyvek® material.</p>	<p>Clothing (including boots) made of Gore-Tex™ or other synthetic water resistant and/or stain resistant material, coated Tyvek® material.</p> <p>Fabric softener.</p>
Personal Care Products (for the day of sampling)	<p><b>Sunscreens</b> - Alba Organics Natural Sunscreen, Yes to Cucumbers, Aubrey Organics, Jason Natural Sun Block, Kiss My Face, Baby sunscreens that are “free” or “natural”.</p> <p><b>Insect Repellents</b> - Jason Natural Quit Bugging Me, Repel Lemon Eucalyptus Insect repellent, Herbal Armor, California Baby Natural Bug Spray, BabyGanics.</p> <p><b>Sunscreen and insect repellent</b> - Avon Skin So Soft Bug Guard – SPF 30 Lotion.</p>	Cosmetics, moisturizers, hand cream, and other related products.
Food and Beverage	Bottled water and hydration drinks.	Pre-packaged food, fast food wrappers and containers.
Shelter	The use of a canopy/gazebo/tent, which can be erected over the sample location to provide shelter, may be considered. Note that the canopy is likely to have a PFAS-treated surface and must be handled with care. Gloves must be worn when setting up and moving the tent and then changed immediately afterwards. Further contact with the tent must be avoided until all PFAS samples have been collected and properly stored.	

Notes:

If an item is expected to come in direct contact with field samples, it may be necessary to have the products analyzed for PFAS to confirm that a specific batch or lot number does not contain PFAS. If an item is not expected to come into direct contact with field samples, then the product Safety Data Sheet and/or manufacturing specifications may be reviewed to

determine if the item is PFAS-containing by checking for any chemicals with “fluoro” in the name or the acronyms PTFE, TPE, FEP, ETFE, or PFA.

## **4.0 SAMPLING PRECAUTIONS**

Sampling personnel will don a new pair of nitrile gloves for each new sampling location. Nitrile gloves should be replaced immediately before handling sample bottles, immediately before handling sampling equipment, and immediately before collecting the PFAS samples. Gloves need to be replaced more frequently than typical to limit cross-contamination potential. The sample bottle caps should not be placed on any surface during sampling and, after samples are collected, the bottles should be capped, labeled, and sealed in individual re-sealable plastic (e.g., Ziploc®) bags.

For soil sampling, an allowable sampling device (as outlined above – Teflon®/PFAS-free) will be used for field sampling. In general, non-dedicated stainless steel sampling equipment will be used for PFAS soil sample collection as listed in Section 5.0. As necessary, PFAS-free plastic sheeting will be used to prevent contact with potentially contaminated soil and other surfaces during storage and deployment of downhole sampling equipment.

## **5.0 SAMPLING EQUIPMENT/SUPPLIES**

The following section lists equipment to be used for sampling of PFAS in soil.

- Laboratory-supplied sample containers
- PFAS-free DI water
- Laboratory-supplied cooler(s)
- Field Sampling Forms
- 5-gallon bucket
- PFAS-free Plastic Sheeting
- Spade(s), scoop(s), bowl(s)
- Hand auger
- Decontamination buckets and brushes, paper towels, non-phosphatic detergent, potable water, distilled/de-ionized water, and PFAS-free water for equipment decontamination between sampling locations
- Field documentation materials
- Personal Protective Equipment (PPE)

## **6.0 DATA USABILITY AND REPORTING**

As analytical data packages are received from the laboratory, each package will be reviewed to ensure data usability for the objectives of the sampling event. This review will include, but is not limited to, sample hold times, lab qualifiers, surrogate recoveries, sample naming conventions, collection dates/times, analyzing data/times, etc. Final data packages will be imported into an EQuIS database for data storage. The database will be used to generate analytical data summary tables that compare the values to Pennsylvania Department of Environmental Protection (PADEP) Medium Specific Concentrations (MSC) for PFAS. The following table provides PADEP MSCs for Perfluorobutane Sulfonate (PFBS), Perfluorooctane Sulfonate (PFOS) and Perfluorooctanoic Acid (PFOA) in Non-residential

surface soil (0-2 feet). Currently, PFAS compounds on the UCMR 3 list of Perfluoroheptanoic acid (PFHpA), Perfluorononanoic acid (PFNA), and Perfluorohexanesulfonic acid (PFHxS) do not have defined PADEP MSCs.

<b>Regulated PFAS Substance</b>	<b>CAS Number</b>	<b>PADEP MSC (mg/kg)</b>
PFBS	375-73-5	960
PFOS	1763-23-1	64
PFOA	335-67-1	64

Notes:

PADEP MSCs derived from Table 3 – Medium-Specific Concentrations (MSCs) for Organic Regulated Substances in Soil (page 5) under 25 Pa. Code Chapter 250, Administration of the Land Recycling Program (Act 2 cleanup standards) effective November 20, 2021.

PFAS sample data will also be included in an ArcGIS data base for figure generation. Sampling activities, findings, results, conclusions, and tables/figures will be included in a future submittal to the PADEP and EPA.

**Re: Desktop Review and Sampling Plan for PFAS  
former Philadelphia Refining Complex  
3144 Passyunk Avenue, Philadelphia, Pennsylvania**

Dear Mr. Brown:

At the request of the Pennsylvania Department of Environmental Protection (PADEP), Evergreen Resources Management Operations (Evergreen) completed groundwater remediation system sampling in February 2021 for per and polyfluoroalkyl substances (PFAS) at the former Philadelphia Refinery (Site). The results of this sampling were sent to the PADEP on March 22, 2021 and discussed with the PADEP, United States Environmental Protection Agency (USEPA), and the City of Philadelphia (City) on May 5, 2021. On May 14, 2021, the PADEP requested that Evergreen:

- Should research refinery records to determine the locations of all fire training areas, locations of fires where aqueous film forming foam (AFFF) was used, and any other locations where AFFF might have been discharged to the surface or subsurface, including groundwater.
- Sample deep (also referred to as lower aquifer) groundwater monitoring wells at the Site for PFAS and prepare a scope of work to identify wells for sampling based on findings of the desktop review.

The PADEP also recommended that Evergreen complete a soil investigation to characterize PFAS in potentially impacted areas. Evergreen's proposed approach to address the PADEP's May 14, 2021 request was submitted to the PADEP on May 21, 2021 and includes the following tasks:

**Task 1** – Prepare a summary of the desktop review of available resources which detail historic fires, fire training areas and possible AFFF storage facilities on-site since 1960. A target date of June 30, 2021 was proposed for the report summarizing the findings of Task 1.

**Task 2** – Prepare a lower aquifer groundwater sampling plan to evaluate potential PFAS impacts. A target of June 30, 2021 was proposed for a sampling plan.

**Task 3** – Have a discussion with the PADEP and USEPA on the report and sampling plan from Task 1 and 2. This meeting was proposed for the week of July 12<sup>th</sup>. As noted in Section 3.0, Evergreen requests that this meeting be held on July 12, 2021.

**Task 4** – Perform Task 2 groundwater sampling for PFAS subsequent to the July 12<sup>th</sup> meeting and concurrence with the sampling plan.

**Task 5** – Submit lower aquifer groundwater PFAS findings to the agencies by September 30, 2021.

**Task 6** – Have a discussion with PADEP and USEPA in early November 2021 to review lower aquifer groundwater findings and determine if additional investigation is warranted.

This letter presents the findings from the completion of Task 1 and a sampling plan in accordance with Task 2.

## **1.0 SUMMARY OF DESKTOP REVIEW**

Multiple sources of information were reviewed in order to identify potential sources of PFAS at the site in accordance with Task 1, as summarized below.

- Review of readily available media articles and other publicly available information about past fires at the Site. Attachment A summarizes the fires that were covered in the media since the 1960's at the refinery.
- Review of relevant available site maps, including site operational maps (including tank numbers, refining unit numbers, and other relevant operational features) that were incorporated in historic environmental reports, existing and historic utility maps and historic site knowledge.
- Site inspection on June 2, 2021, identifying fire suppression systems, firefighting foam concentrate storage (including both labeled totes and drums) and inspection of locations of past fires (where possible). Photos from this site inspection are included in Attachment B.
- Review of Safety Data Sheets (SDS) provided by Hilco Redevelopment Partners (HRP) for firefighting foam used on site. Cross checking known databases of PFAS constituents identified in specific foam brand names.

Based on the desktop review, areas where firefighting foam may have been previously used at the Site were identified. These are summarized below and shown on Figure 1 and summarized in Table 1.

1. Fire Training Areas
  - a. Routine/Annual Training Areas – application of firefighting foam as part of fire training activities.
  - b. Select Training Areas – Less frequently used training areas.
2. Fires –Firefighting foam was reported to be used to address additional fires at the Refinery, as shown on Figure 1 and Table 1.
3. Storage/Loading Areas and Fire Stations – Though firefighting foam was present at these locations, there is no indication that AFFF containing materials came into the contact with the environment.

## **2.0 PROPOSED SAMPLING PLAN**

An important consideration in determining a sampling plan is the direction of groundwater flow and the potential for background PFAS concentrations migrating onto the Site. Given the ubiquitous nature of PFAS in commerce and industry and the nearby potential sources (some, like Philadelphia Gas Works, with potential use of AFFF foam for fire suppression), it is possible that PFAS may have migrated onto the Site from one of these sources. Figure 1 includes lower aquifer groundwater contours to assist in selection of sampling locations representative of upgradient/background conditions. In addition, since there is no groundwater use at the Site and the majority of the Site is to be capped as part of the planned redevelopment, the proposed sampling plan also includes downgradient sampling locations to assess the potential for PFAS migration off-site.

The proposed sampling plan has been developed in response to the PADEP's request to sample for PFAS at the Site. The proposed approach is to investigate the lower aquifer wells with respect to potential AFFF release areas based on the results of the desktop study. As mentioned in Section 2.0, areas where firefighting foam may have been previously used at the Site were identified, including:

1. Fire Training Areas
2. Fires
3. Storage/Loading Areas and Fire Stations

The sampling plan includes lower aquifer sampling locations proximate to each of these areas, but with the recognition that Evergreen is including proposed sampling locations even in areas with a low potential for release of AFFF to the environment. The proposed sampling locations are shown in Figure 1 and are summarized on Table 1.

The lower aquifer groundwater samples will be collected in accordance with the PFAS-specific SOP included in Attachment C. PFAS sampling requires special considerations to avoid potential PFAS-cross contamination from the sampling equipment and a higher level of QA/QC samples to

C. David Brown, P.G.

June 30, 2021

Page 4

check for sample contamination. In general, Teflon-containing materials will be avoided, and samples will be collected in containers that do not absorb PFAS.

### **Analytical Approach**

Only three PFAS are currently regulated by PADEP under Act 2 (PFOS, PFOA, and PFBS). Evergreen proposes to report the results for these three analytes during the lower aquifer groundwater sampling event. The analyte list could be expanded; however, to include all six of the PFAS compounds that were previously analyzed the Site.

### **3.0 CLOSING**

We would like to have a meeting with the PADEP to review the desktop study, proposed sampling locations and analyte list on July 12, 2021. We have scheduled the groundwater sampling described in the sampling plan for the end of July 2021.

Regards,

Evergreen Resources Management Operations

## **TABLE OF CONTENTS**

1.0 SCOPE AND APPLICABILITY .....	3
2.0 Laboratory Requirements.....	3
3.0 Field QA/QC .....	3
4.0 Sampling Precautions.....	5
4.1    Groundwater Sampling.....	5
5.0 EQUIPMENT/SUPPLIES .....	6

## 1.0 SCOPE AND APPLICABILITY

This Standard Operating Procedure (SOP) provides groundwater sampling protocols for per- and polyfluoroalkyl substances (PFAS).

## 2.0 LABORATORY REQUIREMENTS

The samples will be analyzed for both linear and branched PFAS isomers using a modified U.S. Environmental Protection Agency (USEPA) Method 537.1 with isotope dilution for the USEPA Unregulated Contaminant Monitoring Rule 3 list (listed below) by a laboratory accredited in accordance with Act 90 of 2002 (27 Pa. C.S. §§ 4101-4113) and 25 Pa. Code Chapter 252. Undiluted reporting limits should be 5 nanograms per liter (ng/L) or lower.

Analytical Parameter	CAS No.	Molecular Formula
Perfluoroheptanoic acid - PFHpA	375-85-9	C7HF13O2
Perfluorooctanoic acid - PFOA	335-67-1	C8HF15O2
Perfluorononanoic acid - PFNA	375-95-1	C9HF17O2
Perfluorobutanesulfonic acid - PFBS	375-73-5	C4HF9O3S
Perfluorohexanesulfonic acid - PFHxS	355-46-4	C6HF13SO3
Perfluorooctanesulfonic acid - PFOS	1763-23-1	C8HF17SO3

## 3.0 FIELD QA/QC

The following table provides a summary of QA/QC samples that will be collected in the field and analyzed by the laboratory. PFAS-free water will be supplied by the analytical laboratory for collection of the field blank.

QA/QC Sample Types	Frequency	Description	Nomenclature
Field Blank	1 per sample event.	Collected by pouring an aliquot of laboratory-provided PFAS-free water into a laboratory-supplied sample container.	FB-1
Blind Field Duplicate	1 per sample event	Collected by filling a second set of laboratory-provided containers at a monitoring location and comparing to parent sample.	Dup-1

The following table provides a summary of items that are likely to contain PFAS (i.e., prohibited items) and the allowable alternatives.

<b>Item Category</b>	<b>Allowable Items</b>	<b>Prohibited Items</b>
Pumps and Tubing	<p>High-density polyethylene (HDPE), low-density polyethylene (LDPE), polyvinyl chloride (PVC), silicon, buna-nitrile, or stainless steel (SS) materials.</p> <ul style="list-style-type: none"> <li>• All Polyethylene (PE), PVC, or SS Bailer and nylon rope;</li> <li>• Peristaltic pump (with appropriate tubing);</li> <li>• Waterra® inertial foot valve (Acetal thermoplastic or SS);</li> <li>• PFAS-Free Geotech Snap Sampler®;</li> <li>• PFAS-Free Geotech Portable Bladder Pump; and</li> <li>• Proactive® SS Monsoon submersible pumps with PVC wire lead.</li> </ul>	<p>Teflon®, polytetrafluoroethylene (PTFE), ethylene tetrafluoroethylene (ETFE), Viton®, perfluoroalkoxy (PFA) coating, and other fluoropolymer containing materials.</p> <ul style="list-style-type: none"> <li>• Grundfos Redi-Flo Submersible Pump;</li> <li>• QED Well Wizard® bladder pump;</li> <li>• QED Sample Pro® bladder pump<sup>1</sup>;</li> <li>• Standard Geotech Snap Sampler<sup>®2</sup>;</li> <li>• Standard Geotech Portable Bladder Pump; and</li> <li>• Geotech SS Geosub Pump submersible pump with PVC wire lead.</li> </ul>
Decontamination	Alconox® and/or Liquinox®, deionized rinse, and a final PFAS-free water rinse.	Decon 90.
Sample Storage and Preservation	Laboratory-provided sample container (HDPE or polypropylene bottles), regular ice in re-sealable plastic bags. After sampling, containers will be stored individually in re-sealable plastic bags.	LDPE or glass bottles, PTFE- or Teflon®-lined caps, chemical ice packs. Samples cannot be field filtered due to potential PFAS adsorption onto the filter.
Field Documentation	Plain paper, metal clipboard, Sharpies®, pens.	Waterproof/treated paper or field books, plastic clipboards, non-Sharpies® markers, Post-It®, and other adhesive paper products.
Field Clothing	<p>Well-laundered (more than six times washed after purchase) clothing made of synthetic or cotton material, no fabric softener.</p> <p>Polyurethane and wax coated materials.</p> <p>Boots made with polyurethane and PVC, well-worn or untreated leather boots.</p> <p>PFAS-free Tyvek® material.</p>	<p>Clothing (including boots) made of Gore-Tex™ or other synthetic water resistant and/or stain resistant material, coated Tyvek® material.</p> <p>Fabric softener.</p>

<sup>1</sup> Laboratory data were provided by QED indicating the Sample Pro pump body, housing and check balls, LDPE bladder, Viton® O-rings, polyethylene tubing, Teflon®-lined tubing, and all Teflon® tubing did not result in PFAS greater than the 5-10 ng/l method reporting limits in water that these materials were soaked in.

<sup>2</sup> Laboratory data were provided by Geotech indicating the Snap Sampler® (including the PFA coated spring, the molded PFA "Snap Cap" and the Viton® o-ring) did not result in PFAS greater than the 1.2 ng/l method reporting limits in PFAS-free water sampled by Snap Samplers®.

Item Category	Allowable Items	Prohibited Items
Personal Care Products (for the day of sampling)	<b>Sunscreens</b> – Alba Organics Natural Sunscreen, Yes To Cucumbers, Aubrey Organics, Jason Natural Sun Block, Kiss My Face, Baby sunscreens that are “free” or “natural”. <b>Insect Repellents</b> – Jason Natural Quit Bugging Me, Repel Lemon Eucalyptus Insect repellent, Herbal Armor, California Baby Natural Bug Spray, BabyGanics. <b>Sunscreen and insect repellent</b> – Avon Skin So Soft Bug Guard – SPF 30 Lotion.	Cosmetics, moisturizers, hand cream, and other related products.
Food and Beverage	Bottled water and hydration drinks.	Pre-packaged food, fast food wrappers and containers.
Shelter	The use of a canopy/gazebo/tent, which can be erected over the sample location to provide shelter, may be considered. Note that the canopy is likely to have a PFAS-treated surface and must be handled with care. Gloves must be worn when setting up and moving the tent and then changed immediately afterwards. Further contact with the tent must be avoided until all PFAS samples have been collected and properly stored.	

Notes:

If an item is expected to come in direct contact with field samples, it may be necessary to have the products analyzed for PFAS to confirm that a specific batch or lot number does not contain PFAS. If an item is not expected to come into direct contact with field samples, then the product Safety Data Sheet and/or manufacturing specifications may be reviewed to determine if the item is PFAS-containing by checking for any chemicals with “fluoro” in the name or the acronyms PTFE, TPE, FEP, ETFE, or PFA.

## 4.0 SAMPLING PRECAUTIONS

Particular care will be taken for sampling personnel to don a new pair of nitrile gloves for each new sampling location. Nitrile gloves should be replaced immediately before handling sample bottles, immediately before handling sampling equipment, and immediately before collecting the PFAS samples. Gloves need to be replaced more frequently than typical to limit cross-contamination potential. Additionally, if feasible (and PFAS concentration data are available), locations should generally be sampled in order of least anticipated PFAS concentrations to greatest anticipated PFAS concentrations.

PFAS samples should be collected first, prior to collecting samples for any other parameters into any other containers. The sample bottle caps should not be placed on any surface during sampling and, after samples are collected, the bottles should be capped, labeled, and sealed in individual re-sealable plastic (e.g., Ziploc®) bags.

### 4.1 Groundwater Sampling

An allowable sampling device (as outlined above – Teflon®/PFAS-free) will be used for field sampling. When feasible, peristaltic pumps with disposable PE tubing and silicone tubing are a preferred sampling method at locations with a depth to groundwater of less than approximately 25 feet because less agitation of the water column is likely compared to an inertial pumping method. Turbidity and suspended solids in samples may interfere with laboratory methods, potentially elevating reporting limits, and may also cause variation in

analytical data. Dedicated PE tubing with SS or acetal thermoplastic Waterra® inertial pumps are preferred sampling methods at locations with greater depths to groundwater and/or greater sampling depths. Dedicated or disposable all PE, PVC or SS bailers are also acceptable alternatives. As necessary, PFAS-free plastic sheeting will be used to prevent contact with potentially contaminated soil and other surfaces during storage and deployment of downhole sampling equipment.

The Waterra® hand pump may be used and will consist of ½-inch HDPE tubing and a Delrin acetal thermoplastic standard foot valve. The standard foot valve typically comes in two sizes, a Model D-25 (3-inches in length and 1-inch outside diameter) and Model D-16 (1-inch in length and 0.625-inch outside diameter). Model D-25 foot valves are anticipated for use at the site. A new foot valve will be used at each monitoring location.

## **5.0 EQUIPMENT/SUPPLIES**

- Laboratory-supplied sample containers and PFAS-free DI water
- Field Sampling Forms
- Peristaltic pump
- Inertial pump (i.e., Waterra®-type D-16 or D-25 check valve or equivalent)
- Dedicated polyethylene bailer with new nylon rope
- Polyethylene tubing (½-inch HDPE or similar)
- Glass jar (quart or liter capacity) for field parameters
- 5-gallon bucket (with graduations)
- Silicon tubing
- Multi-parameter sonde (Hydrolab Quanta [with turbidity probe])
- Slope Indicator or QED (or equivalent) electronic water level meter
- Stainless steel spade(s), scoop(s), mixing bowl(s)
- Decontamination buckets and brushes, paper towels, non-phosphatic detergent, potable water, distilled/de-ionized water, and PFAS-free water for equipment decontamination between sampling locations
- Field documentation materials
- Personal protective equipment (PPE)

The results set forth herein are provided by SGS North America Inc.

Sanborn, Head & Associates, Inc.

# JD47400: Chain of Custody

## SGS Sample Receipt Summary

Job Number: JD47400 Client: SANBORN HEAD & ASSOCIATES, INC. Project: SANHPAFW:FORMER PHILADELPHIA RE  
 Date / Time Received: 6/24/2022 2:52:00 PM Delivery Method: Airbill #'s:

Cooler Temps (Raw Measured) °C: Cooler 1: (3.1);

Cooler Temps (Corrected) °C: Cooler 1: (2.8);

### Cooler Security

	<u>Y or N</u>		<u>Y or N</u>	
1. Custody Seals Present:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Custody Seals Intact:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### Cooler Temperature

	<u>Y or N</u>	
1. Temp criteria achieved:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Cooler temp verification:	IR Gun	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

### Quality Control Preservation

	<u>Y or N</u>	<u>N/A</u>	
1. Trip Blank present / cooler:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2. Trip Blank listed on COC:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
3. Samples preserved properly:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
4. VOCs headspace free:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

### Sample Integrity - Documentation

	<u>Y or N</u>	
1. Sample labels present on bottles:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Container labeling complete:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Sample container label / COC agree:	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### Sample Integrity - Condition

	<u>Y or N</u>	
1. Sample recvd within HT:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. All containers accounted for:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Condition of sample:	Intact	

### Sample Integrity - Instructions

	<u>Y or N</u>	<u>N/A</u>
1. Analysis requested is clear:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Bottles received for unspecified tests	<input type="checkbox"/>	<input checked="" type="checkbox"/>
3. Sufficient volume recvd for analysis:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4. Compositing instructions clear:	<input type="checkbox"/>	<input type="checkbox"/>
5. Filtering instructions clear:	<input type="checkbox"/>	<input type="checkbox"/>

# Isotope Dilution Standard Recovery Summary

Page 3 of 3

Job Number: JD47653

Account: ALNJ SGS Dayton, NJ

Project: SUNOCOSS: SANHPAFW:Former Philadelphia Refinery, 3144 W. Passyunk Avenue, Philade

Method: EPA 537M BY ID

Matrix: SO

Samples and QC shown here apply to the above method

Isotope Dilution Standards	Recovery Limits
----------------------------	-----------------

Isotope Dilution Standards	Recovery Limits
----------------------------	-----------------

S1 = 13C4-PFH <sub>A</sub>	50-150%
S2 = 13C8-PFOA	50-150%
S3 = 13C9-PFNA	50-150%
S4 = 13C3-PFBS	50-150%
S5 = 13C3-PFH <sub>xS</sub>	50-150%
S6 = 13C8-PFOS	50-150%

(a) Outside control limits.
