Belmont Terminal
2700 West Passyunk Avenue
Philadelphia, Pennsylvania

1 Introduction

Stantec Consulting Services Inc. (Stantec) has prepared this Technical Memorandum for Evergreen Resources Group, LLC (Evergreen) summarizing high resolution site characterization (HRSC) and other subsurface investigation activities conducted at the Energy Transfer Marketing & Terminals L.P. (ET) Belmont Terminal (facility, see **Figure 1**) in 2020 and 2021. The primary goal of the ongoing project is to characterize the geologic framework, potential preferential pathways, and distribution of petroleum hydrocarbon related contamination in the context of the State of Pennsylvania's Land Recycling and Environmental Remediation Standards Act (Act 2) with focus on the requirements for future submission of a Remedial Investigation Report (RIR) for the Belmont Terminal (§250.408). Some work was performed on adjacent portions of the former Philadelphia Refinery in support of the development of a conceptual site model (CSM) for the Belmont Terminal. It is anticipated that an RIR for the Belmont Terminal will be submitted to the Pennsylvania Department of Environmental Protection (PADEP) in late 2022 to early 2023. The goal of this memo is to document recent site activities. As required, the upcoming RIR will include a detailed site history and document historical data in addition to recent data.

2 Investigation Activities

Investigation activities performed as part of the 2020-2021 HRSC included electrical resistivity imaging, confirmation drilling, well gauging, and groundwater sampling. Stantec performed the investigation activities in coordination with Evergreen.

2.1 Electrical Resistivity Imaging

To develop a high-resolution CSM for the Belmont Terminal, Aestus, LLC (Aestus) was contracted to conduct electrical resistivity imaging (ERI). The goal of imaging was to collect data in support of the ongoing

CSM development by acquiring ultra-high resolution subsurface imagery detailing the geologic framework, potential preferential pathways, and distribution of petroleum hydrocarbon related contamination. Imaging was performed in the Belmont Terminal and immediately adjacent portions of the former Philadelphia Refinery.

The process used by Aestus to collect and analyze subsurface imagery is discussed in detail in their report provided as **Attachment A,** including supporting figures. Stantec and Evergreen worked with Aestus through review of onsite and offsite data to select areas for imaging onsite at the Belmont Terminal and offsite in adjacent Area of Interest (AOI) 1 and 2 of the former Philadelphia Refinery. Stantec oversaw the installation of 23 GeoTrax Survey™ lines (PHL-01 through PHL-23) by Aestus between January and March 2020. Prior to subsurface work, a Pennsylvania One Call Notification was completed, and Master Locators, a Ground Penetrating Radar Systems LLC (GPRS) Company., performed private utility clearance. To collect the resistivity data along each survey line, Aestus drilled small-diameter (1/2-inch) holes through which 3/8-inch diameter stainless steel electrodes were driven to a maximum depth of approximately 14 inches below ground surface (bgs) to make adequate soil contact. Nominal electrode spacing ranged from 1 meter to 4 meters resulting in total line lengths of approximately 271 feet (ft) to 722 ft, allowing for imaging depths ranging from approximately 54ft bgs to 144 ft bgs. Cables were placed at the land surface connecting the electrodes, and a 12-volt deep cycle marine battery was used to inject a current into the ground.

The results of the GeoTrax Survey™ included in **Attachment A** were used to select follow up locations for the confirmation drilling program to be described in **Section 2.2** and further discussed in **Section 3**.

2.2 Confirmation Drilling Program

Stantec designed and implemented a field program to collect subsurface data in general accordance with the suggestions provided by Aestus following the GeoTrax Survey™. Confirmation drilling activities were conducted in December 2020 through March 2021. Stantec field personnel located and marked 20 confirmation drilling locations utilizing distances from survey markers placed by Aestus during implementation of the electrical resistivity profiling. Prior to subsurface work, a Pennsylvania One Call Notification was completed, and Master Locators performed private utility clearance.

A Stantec geologist oversaw drilling and performed logging of the advancement of 20 standard penetration test borings at the confirmation drilling locations. Drilling was performed by Parratt Wolff, Inc. (PWI). Test borings were continuously sampled with a split-barrel sampler and hollow stem auger/mud rotary to the terminal depths recommended by Aestus, except for several borings completed to the depth of the lower aquifer. Generally, these borings were sampled continuously until the clay unit, identified as the middle clay, was identified. Sampling continued at a regular interval until a sand unit, indicative of the lower aquifer, was identified; then sampling resumed to boring completion. Soil boring logs are included in **Attachment B**. Note that boring prefixes “CD” and “BT” were both used during the work and can be considered interchangeable.

During test boring advancement, Stantec scanned core samples with a combination photoionization detector (PID) and flame ionization detector (FID) to assess for presence or absence of organic/inorganic vapor compounds, including methane. Stantec collected 51 soil samples and 14 groundwater samples from discrete depths/depth intervals following Aestus’ suggestions and field observations to sufficiently

characterize and calibrate electrical anomalies identified in interim reporting. Soil samples were collected from the standard penetration test cores after they were split, measured, and scanned. Groundwater was sampled via low-flow methodology through a two-inch diameter, three-foot long stainless-steel temporary well point installed by PWI.

A Stantec geologist specified well construction based on the boring data and performed field oversight of well installation and well development activities of 20 two-inch diameter permanent monitoring wells (S-452 through S-470 and S-472). Five wells (S-454, S-459, S-460, S-462, and S-470) were screened in the lower (semi-confined) aquifer, and the remaining 14 wells were installed with screens in the water-table (unconfined) aquifer. Wells were developed by PWI following installation via pump/surge until the groundwater was observed to be free of turbidity. Well logs for S-452 through S-470 and S-472 are included in **Attachment B**, and well locations are shown on **Figure 2**.

Groundwater and sediment generated during well development was store onsite in totes. The liquids were emptied by Total Quality Drilling of Mullica Hill, New Jersey using a vacuum truck and the water was treated at the facility's wastewater treatment plant. Soil cuttings and drilling mud were containerized a roll off container and disposed offsite at Clean Earth of North Jersey in Kearny, New Jersey. Disposal documentation is included in **Attachment C**.

In general, soil samples collected during the confirmation drilling program were analyzed for Evergreen Petroleum Short List compounds plus tertiary butyl alcohol (TBA), and total petroleum hydrocarbons (TPH), separated by carbon number into the gasoline, diesel, and heavier ranges for crude oil. Groundwater samples were additionally analyzed for the general chemistry parameters: nitrate; chloride; sulfate; total sulfide; ammonia as nitrogen; total iron; major ions; alkalinity as calcium carbonate; total organic carbon; and dissolved gasses (headspace hydrocarbons methane, ethane, and ethene). Note that some discrete groundwater sampling intervals produced limited water; so, some groundwater samples were not analyzed for all parameters. Select soil and groundwater samples were also analyzed as part of the forensics sampling program which will be described in further detail in **Section 2.5**. Soil sample results are summarized on **Table 1**; groundwater results for the depth-discrete groundwater samples are summarized on **Table 2;** and select soil and groundwater analytical results are also displayed on the Aestus GeoTrax™ Survey figures in **Attachment A**. Soil results are screened against the soil to groundwater (S to GW) Medium Specific Concentrations (MSCs) and the non-residential direct contact (NRDC) MSC. Note that some samples were collected in the permanently saturated zone; therefore, the S to GW MSCs are not applicable but are shown for comparison purposes. Groundwater analytical results are screened against PADEP MSCs for non-residential properties overlying used aquifers with total dissolved solids (TDS) less than or equal to 2,500 milligrams per liter (mg/L), also referred to as the Statewide Health Standard (SHS). Laboratory analytical reports are included in **Attachment D**.

2.3 Well Gauging

Groundwater gauging of the new monitoring wells were performed in the spring and fall of 2021 (see **Table 3**). Field personnel collected liquid level data, including depth to water and where applicable depth to light nonaqueous phase liquid (LNAPL) measurements, in accordance with the *Evergreen Field Procedures Manual* (see **Attachment E**).

2.4 Monitoring Well Sampling

Two characterization groundwater sampling events were conducted in 2021, in the spring and the fall. Monitoring wells were sampled during two events conducted in 2021 in accordance with the *Evergreen Field Procedures Manual* (**Attachment E**). Samples were generally collected via low-flow methodology. The samples were analyzed for the following compounds:

- Evergreen Petroleum Short List plus TBA
- TPH
- sulfate
- total iron
- total calcium
- total carbon
- total inorganic carbon
- total organic carbon
- total Kjeldahl nitrogen
- alkalinity as calcium carbonate
- dissolved gasses (headspace hydrocarbons methane, ethane, and ethene)

During the spring 2021 event, select monitoring wells in proximity to City of Philadelphia (City) combined sewers were sampled for sucralose as a line of information supporting groundwater and sewage interactions (sewer leaks). Sucralose samples were analyzed by the Environmental Analysis Research Laboratory Southeast Environmental Research Center at Florida International University of Miami, Florida. A subset of monitoring wells was also sampled for metagenomic analysis during the spring 2021 sampling event. These samples were sent to Microbac to be analyzed for total eubacteria (EBAC) through quantitative polymerase chain reaction (qPCR) functional gene analysis and for metagenomic analysis. For enhanced understanding of the fate and transport and potential source for petroleum compounds in the Belmont area, select wells were sampled for compound specific isotope analysis (CSIA). CSIA samples were analyzed at the University of Oklahoma, School of Geosciences (OU). Additionally, in December 2019, a forensics sampling program was implemented that included soil, LNAPL, and groundwater sample characterization for the former Philadelphia Refinery and nearby areas including the Belmont Terminal. This program is discussed in additional detail in **Section 2.5** and **Attachment F**.

A summary of Evergreen Petroleum Short List constituents of concern (COCs) plus TBA concentrations, stabilized field parameters, and general chemistry parameters in groundwater samples collected for the Belmont Terminal investigation program in 2021 is presented in **Table 4** (unconfined aquifer wells) and **Table 5** (lower aquifer wells). These tables show the groundwater analytical results screened against the non-residential SHS. Sucralose results are presented on **Table 6** and EBAC results are presented on **Table 7**. Note also that select groundwater analytical results are also displayed on the Aestus GeoTrax™ Survey Figures in **Attachment A.** Environmental forensics analytical data reports are presented in **Attachment F**. Monitoring well locations are shown on **Figure 2**. Laboratory analytical reports for groundwater are included in **Attachment D**.

2.5 Environmental Forensics Program

An environmental forensics sampling program was completed to bolster the routine chemistry data with a comprehensive characterization and statistical analysis of chemical compositional patterns exploring multiple sample media to support the characterization and delineation of Belmont Terminal contaminant sources. CSIA samples were collected to support the forensics lines of information by investigating forensic differences in stable isotope chemistry of groundwater samples.

2.5.1 MOLECULAR DATA EXPLORATION AND INTERPRETIVE REPORTING

ChemQuants was retained by Stantec on behalf of Evergreen to perform an environmental forensics investigation in support of the Belmont Terminal investigation. The initial objective was to fingerprint selected samples from the drilling program to explore the various sources and where possible, to age-constrain the timing of petroleum releases.

In the Belmont Terminal, five soil samples were collected for forensic analysis:

- BT-05-S-9-20201210
- BT-18B-S-11-20210126
- BT-03-S-41-20210129
- BT-22A-S-32-20210303
- BT-01-S-33-20210216

Attachment F includes ChemQuants reports that describe basic forensics interpretations for these samples. In September 2021, Evergreen submitted the Remedial Investigation Report (RIR) Addendum for Area of Interest (AOI) 4 at the former Philadelphia Refinery which included as an appendix the forensics dataset to that point in time. The Sitewide Fate and Transport RIR, to which this memo is an appendix, includes as another attachment, the updated version of the forensics dataset as prepared by ChemQuants that is inclusive of the Belmont Terminal samples.

2.5.2 CSIA PETROLEUM SOURCE IMPLICATIONS AND BIODEGRADATION

CSIA is a powerful forensics tool that complements environmental forensics as an additional line of information regarding differentiation of sources, extent of biodegradation, and biodegradation pathways which often associate with other pathways of groundwater flow. Stantec retained MES, LLC (MES) on behalf of Evergreen to interpret the CSIA dataset and provide expertise in geochemistry on the project.

The September 2021 AOI 4 RIR Addendum included as an appendix the data and interpretation of the CSIA dataset up to that point. The Sitewide Fate and Transport RIR, to which this memo is an appendix, includes as another attachment, the updated version of CSIA dataset as prepared by MES that is inclusive of groundwater samples collected in the Belmont Terminal.

3 Results and Discussion

3.1 Constituents of Concern

The upcoming RIR for Belmont Terminal will have a comprehensive discussion of historical soil and groundwater data collected at the facility including a discussion of delineation. This discussion is based on data collected during the HRSC investigation between 2020 and 2021. Distribution of COCs is discussed in additional detail in the Aestus report in **Attachment A**.

3.1.1 SOIL

- In the 2-15 ft bgs interval, benzene was detected in two samples above the NRDC MSC of 330 milligrams per kilogram (mg/kg) at locations S-463 and S-464 (**Table 1**).
- Benzene, methyl tertiary butyl ether (MTBE), and toluene were detected above their respective S to GW MSCs at multiple locations.
- 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene were detected above their respective S to GW MSCs at location S-467.

3.1.2 GROUNDWATER

- In the unconfined aquifer, the following compounds were detected above the SHS (**Table 4**): benzene; 1,2,-dichloroethane; ethylbenzene; MTBE; naphthalene; toluene; 1,2,4-trimethylbenzene; 1,3,5-trimethylbenzene; xylenes; benzo(a)anthracene; benzo(a)pyrene; benzo(b)fluoranthene; benzo(g,h,i)perylene; chrysene; and dissolved lead.
- In the lower aquifer, benzene was detected above the SHS at all locations in spring 2021 (**Table 5**). Benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, and chrysene were detected above the SHS at S-394.

3.2 Aestus Technical Memorandum

The technical memorandum prepared by Aestus, included in **Attachment A**, provides a detailed analysis of the electrical resistivity survey results integrated with the data collected during the confirmation drilling program and some historical data. Key takeaways from the Aestus summary include the following:

- The electrical resistivity survey identified areas where electrical anomalies vertically crossed the clay layer. These areas were investigated in the confirmation drilling program as potential zones of middle clay discontinuity.
- Each of the 18 soil borings advanced to the expected depth of the middle clay encountered the clay unit.

- The subsurface in Belmont Terminal is biologically active as indicated by the high electrical conductivity measured during the electrical resistivity testing.
- Groundwater samples showed signatures of degraded petroleum as evidenced by benzene, toluene, and xylene ratios.
- Isolated resistive features were present below the middle clay. These features were interpreted to be indicative of gas pockets, likely due to buildup of carbon dioxide resulting from petroleum degradation below the middle clay.
- Geochemical signatures indicate partitioning of microbiomes above and below the middle clay. The biogeochemistry is distinctly different in the unconfined and lower aquifers with higher methane and nitrogen concentrations above the middle clay and higher sulfate below.
- Contaminant concentrations are distinct above and below the middle clay with significantly higher concentrations in the unconfined aquifer.
- MTBE is largely contrained within the “central zone”. Areas of highest concentrations of benzene are in the northeastern zone of the property, along the Shunk Street sewer, and the southern portion of the “central” zone.

3.3 Data Analysis/Summary of HRSC Findings

- The ERI performed by Aestus as a screening tool identified subsurface anomalous zones (discrete target features) that were explored through test drilling at 20 locations. Twenty new monitoring wells were installed at the test drilling locations to allow for sampling of groundwater in both water-bearing, hydrostratigraphic units (the unconfined and lower aquifers).
- The ERI combined with soil and groundwater sampling support that the Potomac-Raritan-Magothy (PRM) aquifer series middle clay unit aquitard is spatially contiguous below the Belmont Terminal area and demonstrated to be effective at minimizing the downward migration of shallow groundwater contamination into the lower aquifer in that area. This confirms the middle clay interpretation from the existing 2016 AOI 1 RIR conceptual site model and how the aquitard is represented in the Groundwater Flow (GWF) Model presented in the 2022 Sitewide Fate and Transport RIR to which this memo is an attachment.
- Results from the groundwater gauging and sampling indicate that the general groundwater flow pattern is from north to south but with an area of convergence near the Shunk Street sewer where it intersects Frontage Road and Passyunk Avenue (**Attachment A, Inset Graphic 4**). The pattern supports that the Shunk Street sewer leaks and is removing groundwater from the area.

- There is significant petroleum hydrocarbon biodegradation occurring beneath Belmont Terminal and proximity. Bioactivity is pervasive in the form of electrically conductive biofilms that effectively allow for transfer of electrons resulting from hydrocarbon breakdown in shallow zones to deeper and adjacent substrate. Metagenomic data supporting this finding are discussed further in the Sitewide Fate and Transport RIR. Other lines of data supporting this finding are elevated groundwater temperatures, elevated biogenic gases (methane and carbon dioxide), and petroleum forensics.

- The horizontal and vertical extents of petroleum hydrocarbon contamination have been further characterized in both water bearing units. The lower aquifer is significantly less impacted than the unconfined aquifer, generally by an order of magnitude or more.

- No significant LNAPL sources were identified with the HRSC tools. The dataset supports that the sources of petroleum to shallow groundwater are areas of residual LNAPL present in granular deposits, and possibly back diffusing from intervening mud layers common to the Pleistocene-age deposits and PRM upper clay unit, where present.

- The most significant groundwater benzene impacts in the water table are in the northeast corner of Belmont Terminal generally on the north side of the Shunk Street sewer. There are two additional elevated benzene areas in central portions, extending into the Former Philadelphia Refinery AOI 1, and along the northern perimeter near the terminal entrance. MTBE is mostly constrained to central parts of the terminal with perimeter extending north towards Frontage Road and south into AOI 1.

- A submerged oil was identified in several borings on top of the PRM upper clay unit, in the deepest interval of Pleistocene-age deposits. Forensic analysis, detailed in the Sitewide Fate and Transport RIR, indicates that this oil consists of manufactured gas plant (MGP) pyrogenic residues in some places mixed with sulfur rich residual range petroleum. The MGP residues appear to have been derived from a naphtha range to light distillate range petroleum feedstock. Similar signatures were identified in upgradient samples to the north and west around the Philadelphia Gas Works (PGW) Passyunk Facility perimeter. Data supports that the source of this oil is the PGW Passyunk Facility.

- MGP residues are generally enriched in polycyclic aromatic hydrocarbon (PAH) compounds such as naphthalene and benzo(a)pyrene, and it is plausible that a significant portion of these compounds identified in Belmont Terminal shallow groundwater migrated south from PGW Passyunk Facility sources and/or directly partitioned from the migrating PGW Passyunk Facility oil body.

- CSIA, as detailed in the Sitewide Fate and Transport RIR was performed to understand sources and extent of biodegradation of benzene, toluene, ethyl benzene and xylenes (BTEX),

Reference: High Resolution Site Characterization Activities, Belmont Terminal, 2700 West Passyunk Avenue, Philadelphia, Pennsylvania

two naphthene compounds, and MTBE. Belmont Terminal samples were part of a larger dataset used to expand upon findings of Stantec's AOI 4 RIR Addendum. Benzene and toluene CSIA support that there is a PGW Passyunk Facility source that is impacting both Belmont Terminal and an onsite area of AOI 8. There is also a prevalent Belmont Terminal benzene source that impacts AOI 1 and areas offsite along 26th Street.

Table 1: Soil Sampling Analytical Results Summary
Belmont Terminal
Philadelphia Refinery Operations, a series of Evergreen Resources Group, LLC

Notes:

MSC-PA	Pennsylvania Department of Environmental Protection (PADEP) - Medium Specific Concentrations
A	Medium Specific Concentrations (MSCs) for Organic/Inorganic Regulated Substances in Soil – Soil to Groundwater, Higher of the 100x the Groundwater MSC and the Generic Value (Unsaturated), Non-Residential
B	Medium-Specific Concentrations (MSCs) for Organic/Inorganic Regulated Substances in Soil – Direct Contact, Non-Residential Subsurface Soil (2-15 ft)
190[A]	Concentration exceeds standard A.
190[B]	Concentration exceeds standard B.
15.2	Measured concentration did not exceed the indicated standard.
ND (0.50)	Indicates the laboratory method detection limit (if available) was above the applicable standard. The reporting limit is shown if the laboratory method detection limit is not available.
ND (0.03)	Indicates concentration not detected above the laboratory reporting limit (in parentheses) except when the reporting limit is greater than the standard in which case the method detection limit is listed in parentheses.
n/v	No standard/guideline value
-	Parameter not analyzed / not available
B	Indicates the analyte is detected in the associated blank as well as in the sample.
E	Indicates compounds whose concentrations exceed the calibration range of the instrument.
F2	Matrix spike/matrix spike duplicate (MS/MSD) relative percent difference (RPD) exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time.
J	Indicates an estimated value
TL	Internal standards response or retention time outside acceptable limits.
mg/kg	milligrams per kilogram
ft	feet
LANCASTER	Eurofins Lancaster Laboratories, Inc.

Notes:

MSC-PA	Pennsylvania Department of Environmental Protection
	Medium-Specific Concentrations (MSCs) for Organic/Inorganic Regulated Substances in Groundwater - Used Aquifer, Non Residential, TDS ≤ 2500
6.5	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
ND (0.50)	Indicates the laboratory method detection limit (if available) was above the applicable standard. The reporting limit is shown if the laboratory method detection limit is not available.
ND (0.03)	Indicates concentration not detected above the laboratory reporting limit (in parentheses) except when the reporting limit is greater than the standard in which case the method detection limit is listed in parentheses.
n/v	No standard/guideline value
-	Parameter not analyzed / not available
B	Indicates the analyte is detected in the associated blank as well as in the sample.
H	Sample was prepped or analyzed beyond the specified holding time.
J	Indicates an estimated value
µg/L	Micrograms per liter

Table 4: Groundwater Analytical Results - Unconfined Aquifer (2021)
Belmont Terminal
Philadelphia Refinery Operations, a series of Evergreen Resources Group, LLC

Notes:

MSC-PA	Pennsylvania Department of Environmental Protection
	Medium-Specific Concentrations (MSCs) for Organic/Inorganic Regulated Substances in Groundwater - Used Aquifer, Non Residential, TDS ≤ 2500
6.5	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
ND (0.50)	Indicates the laboratory method detection limit (if available) was above the applicable standard. The reporting limit is shown if the laboratory method detection limit is not available.
ND (0.03)	Indicates concentration not detected above the laboratory reporting limit (in parentheses) except when the reporting limit is greater than the standard in which case the method detection limit is listed in parentheses.
n/v	No standard/guideline value
-	Parameter not analyzed / not available
!	Laboratory is not accredited for this parameter.
^L	Reporting Limit Check Standard is outside acceptance limits, high biased
B	Indicates the analyte is detected in the associated blank as well as in the sample.
E	Indicates compounds whose concentrations exceed the calibration range of the instrument.
IQ	Indeterminate qualifier. Refer to associated laboratory report.
J	Indicates an estimated value
mg/L	Milligrams per liter
mV	Millivolts
S.U.	Standard Units
mS/cm	Millisiemens per centimeter
deg c	Degrees Celcius
NTU	Nephelometric Turbidity Units
µg/L	Micrograms per liter

Table 5: Groundwater Analytical Results- Lower Aquifer (2021)
Belmont Terminal
Philadelphia Refinery Operations, a series of Evergreen Resources Group, LLC

Notes:

MSC-PA	Pennsylvania Department of Environmental Protection
	Medium-Specific Concentrations (MSCs) for Organic/Inorganic Regulated Substances in Groundwater - Used Aquifer, Non Residential, TDS ≤ 2500
6.5	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
ND (0.50)	Indicates the laboratory method detection limit (if available) was above the applicable standard. The reporting limit is shown if the laboratory method detection limit is not available.
ND (0.03)	Indicates concentration not detected above the laboratory reporting limit (in parentheses) except when the reporting limit is greater than the standard in which case the method detection limit is listed in parentheses.
n/v	No standard/guideline value
-	Parameter not analyzed / not available
!	Laboratory is not accredited for this parameter.
^L	Reporting Limit Check Standard is outside acceptance limits, high biased
B	Indicates the analyte is detected in the associated blank as well as in the sample.
E	Indicates compounds whose concentrations exceed the calibration range of the instrument.
IQ	Indeterminate qualifier. Refer to associated laboratory report.
J	Indicates an estimated value
mg/L	Milligrams per liter
mV	Millivolts
S.U.	Standard Units
mS/cm	Millisiemens per centimeter
deg c	Degrees Celcius

1.0 PROJECT OVERVIEW

Aestus, LLC (Aestus) performed its GeoTrax CSM+™ conceptual site model (CSM) update process for Stantec at the Belmont Terminal Site located within the former Philadelphia Refinery in Philadelphia, Pennsylvania. Inset Graphic 1 below summarizes Aestus' GeoTrax CSM+™ Process employed to complete the project. Please read the remainder of the report for more detailed discussion, conclusions, and supporting data.

Inset Graphic 1 – Aestus' GeoTrax CSM+™ 5-Step Process

1.1 Project Objectives

In the context of updating the CSM for the Belmont Terminal Site the abovementioned GeoTrax CSM+™ process was applied to accomplish the following project objectives as requested by Stantec:

1. Determine extent of contamination related to petroleum hydrocarbons released to the subsurface from a century of product storage, nearby blending, and distribution
2. Map geological and geotechnical engineering data, including:
    a. Stratigraphy with regard to aquitard (Middle Clay) extent
    b. Potential water-bearing unit connectivity
    c. Extent of bioactive zones

Aestus helped Stantec achieve the above projects goals as discussed in Section 5.0 of this report.

© 2022 Aestus, LLC

1.2 Summary of Scope of Work and Results

Review and integration of historical site data is Step 1 of Aestus' process shown in Inset Graphic 1 above. Aestus requested, and received, from Stantec historical site characterization data as outlined in Section 2 below. Aestus integrated these data into our 3D visualization model to further capitalize on the investment of collecting these historical data for CSM updates and for calibration of the GeoTrax Survey™ electrical images.

Field data acquisition is Step 2 of Aestus' process shown in Inset Graphic 1 above. Aestus acquired twenty-three (23) proprietary GeoTrax Survey™ electrical resistivity 2D subsurface images (PHL-01 to PHL-23) January through March 2020. All images undergo strict QA/QC review during and after acquisition. During this review, the image for survey transect line PHL-10 was found to be of insufficient quality presumably due to a considerable number of buried metallic utility lines in various orientations along the image plane. Therefore, PHL-10 was not used in subsequent interpretation nor is it included in the Figures. The remaining image data (see Figures) were of good quality and their locations are shown on Figure PV-1.

During Step 3 of Aestus' GeoTrax CSM+ process, Aestus integrated the GeoTrax Survey™ electrical resistivity imaging data with available historical data. Aestus then interpreted these combined multiple lines of evidence to develop an updated conceptual site model (CSM) and identify areas of uncertainty to be investigated with the targeted confirmation drilling. After completing this process, the updated CSM hypotheses and targeted confirmation drilling (CD) locations were presented to Stantec and Evergreen in August and September 2020.

The primary objectives of the confirmation drilling (CD) program (Step 4 of Aestus' process shown in Inset Graphic 1 above) were to assist in characterization of the more anomalous zones in the GeoTrax Survey™ data to aid in data calibration and the completion of the above project objectives. Stantec performed the CD program during December 2020 through March 2021. Of the 20 CD targets, all 20 were over the applicable regulatory standard for benzene and 7 were over standard for MTBE. These results are discussed further in Section 5.

The last step (Step 5) of Aestus' process involved integration of the newly obtained CD data and sample results from pre-existing wells with the electrical resistivity imaging and other historical data sets. Aestus re-interpreted the data sets and presented Stantec and Evergreen with an updated CSM in April 2022.

The abovementioned data sets resulting from Aestus' work are summarized in Section 4.0 of this report, and an explanation of the conclusions from the collaborative CSM update process are discussed in Section 5.0. Recommendations relative to how to utilize the data and conclusions included with this report are provided in Section 6.0. Aestus' GeoTrax CSM+™ update process is described in more detail in Appendix A.

© 2022 Aestus, LLC

2.0 HISTORICAL DATA SUMMARY

Historical site data collected and generated by others prior to Aestus' involvement on this project includes but may not be limited to the following:

- Boring and monitoring log data
- Modeled geologic surfaces
- Lithologic cross sections
- Impact plume maps
- Modeled aquifer surfaces
- Historical aerial photographs

Aestus incorporated the following data sets in its Step 1 historical data integration process, as shown on the 2D Figures and 3D model included with this report:

- Geology from boring logs
- Geologic models for the following lithologic surfaces:
    - Bottom of Alluvium
    - Top of Middle Clay
    - Bottom of Middle Clay
    - Top of Bedrock
- Records of staining, odor, and NAPL from boring logs
- Analytical soil data and PID measurements during drilling
- Groundwater analytical data
- Groundwater elevation and NAPL thickness measurements
- Buried utility line locations including nearby sewers
- Nearby site features (buildings, former sources, tank farm, etc.)

3.0 PROJECT SCHEDULE

This section provides summary of overall project schedule milestones for work performed for the Belmont Terminal Site by Aestus and Stantec during the GeoTrax CSM+™ process:

January 28 – March 2, 2020:	Aestus performed GeoTrax Survey™ field data acquisition
March – September 2020:	Historical data integration and interpretation performed by Aestus through collaboration with Stantec
September 9, 2020:	Aestus presented Interim Report stage updated CSM and suggested confirmation drilling locations to Stantec and project team
December 2020 – March 2021:	Stantec performed confirmation drilling (20 total confirmation borings)
February 11, 2022:	Aestus received complete confirmation drilling results from Stantec
February – April 2022:	Aestus integrated confirmation drilling results and calibrated the electrical data to provide an updated CSM through collaboration with Stantec
April 29, 2022:	Aestus presented Final Report stage updated CSM conclusions to Stantec and project team
May 20, 2022:	Aestus is submitting this Final Technical Memorandum

© 2022 Aestus, LLC

4.0 RESULTING DATA SETS

This section summarizes the data sets collected by Aestus and Stantec during the collaborative 5-step GeoTrax CSM+™ process. Conclusions based on these data are provided in Section 5.0 of this report.

4.1 GeoTrax Surveys™ and Metadata, Elevation Slices, & 3D Visualization Model

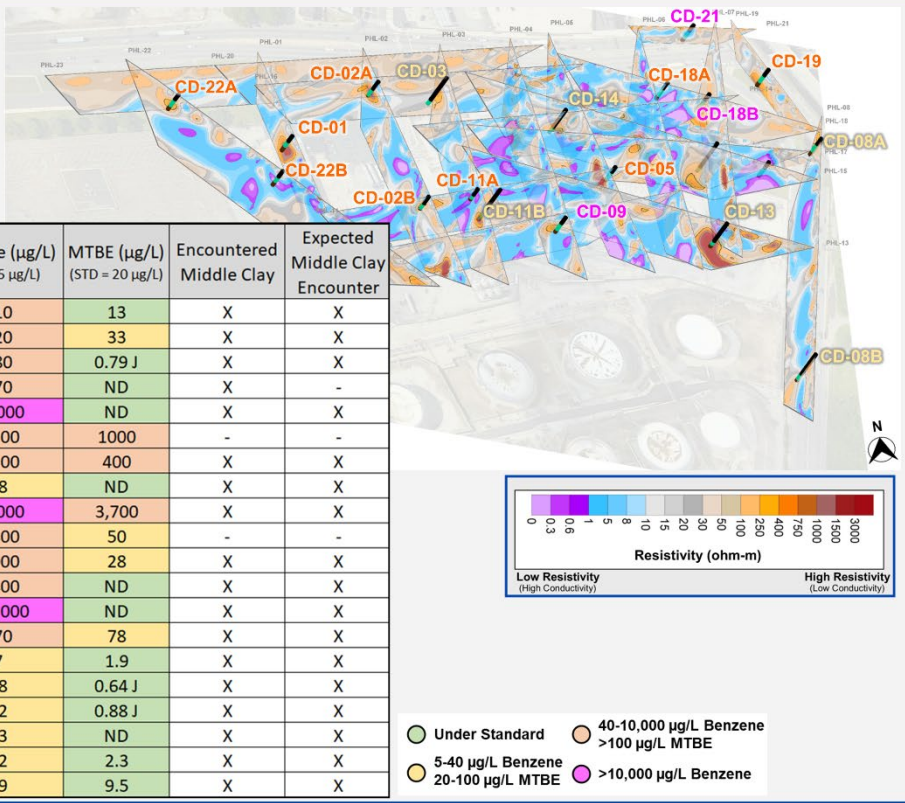
Aestus used subsurface imaging technology to scan the earth's subsurface (i.e., ~54 to ~144 feet below ground surface), at the locations selected by the project team shown on Figure PV-1. A total of twenty-two (22) GeoTrax Survey™ images (PHL-01 through PHL-23) were subsequently generated for the site as shown in Figures 1 through 23, respectively. As noted in Section 1.1, the image for survey transect line PHL-10 was found to be of insufficient quality, presumably due to a considerable number of buried metallic utility lines in various orientations along the image plane. Therefore, PHL-10 was not used in subsequent interpretation nor is it included in the Figure set.

Figure PV-1 shows the location and orientation (i.e., the green ends of the survey lines represent End Electrode 1, and the red ends represent End Electrode 56) of the surveys performed at the Belmont Terminal Site. The final electrode spacing, resulting survey line length and imaging depth at the Belmont Terminal Site are shown in the legend on Figure PV-1 and are also listed in Table 1. GeoTrax Survey™ end electrode land survey coordinates are also listed on Table 1.

Appendix B contains Aestus' field notes for each survey line, which provide metadata about the line location, proximate site features, and photographs along the line. Representative site photographs taken during field work are provided on Figure 24. XYZ geospatial data are also collected for the endpoints and every few electrodes along each survey line. Appendix C contains data output files for each image in XYZR data format (i.e., where XYZ is geospatial data, and R is resistivity data at a defined point in space).

Aestus employed its GeoTrax Viz™ process to effectively integrate and view available data (i.e., geophysical and historical data) together on the survey images to assist with interpreting electrical resistivity image data relative to updating the CSM. These integrated data sets for survey images PHL-01 through PHL-23 are shown in a site-specific color contouring scheme, with superimposed historical data in Figures 1 through 23, respectively. Details on the development of the site-specific color contouring scheme can be found in Appendix A, Section E.4.

The abovementioned imagery and site data have also been integrated into Aestus' 3D visualization model provided with this report for the client's use (see Appendix D which contains the 3D model electronic files and free viewer software).



Aestus developed its "XYZR" software to interpolate between the vertical GeoTrax Survey™ 2D imagery in plan view "slices" at specific elevations. Some of these elevation slices are shown in various graphical data outputs contained in this report and in the 3D model (Appendix D).

4.2 Confirmation Drilling and Sampling Data Summary

The interpretation of the GeoTrax Survey™ electrical resistivity imaging data acquired by Aestus is focused on understanding the meaning of "anomalous" resistivity geometric patterns and the resistivity values (i.e., more or less resistive than background). For this project, calibration of electrical image data to site geochemical conditions was conducted using the integration of pre-existing site-specific data as well as the results from the confirmation drilling program performed by Stantec.

The 20 confirmation drilling (CD) locations (see Inset Graphic 2 below and Figure PV-3) were targeted base on the anomalous zones in the electrical resistivity and integrated historical drilling data and were identified as part of Aestus' Interim Report submitted previously. The tabulated data shown in Inset Graphic 2 below, summarizes some of the key results of the CD program that will be discussed further in the following conclusions section of this report.

As-Built CD	Shallow/Deep Screen (</> 40 ft BGS)	Benzene (µg/L) (STD = 5 µg/L)	MTBE (µg/L) (STD = 20 µg/L)	Encountered Middle Clay	Expected Middle Clay Encounter

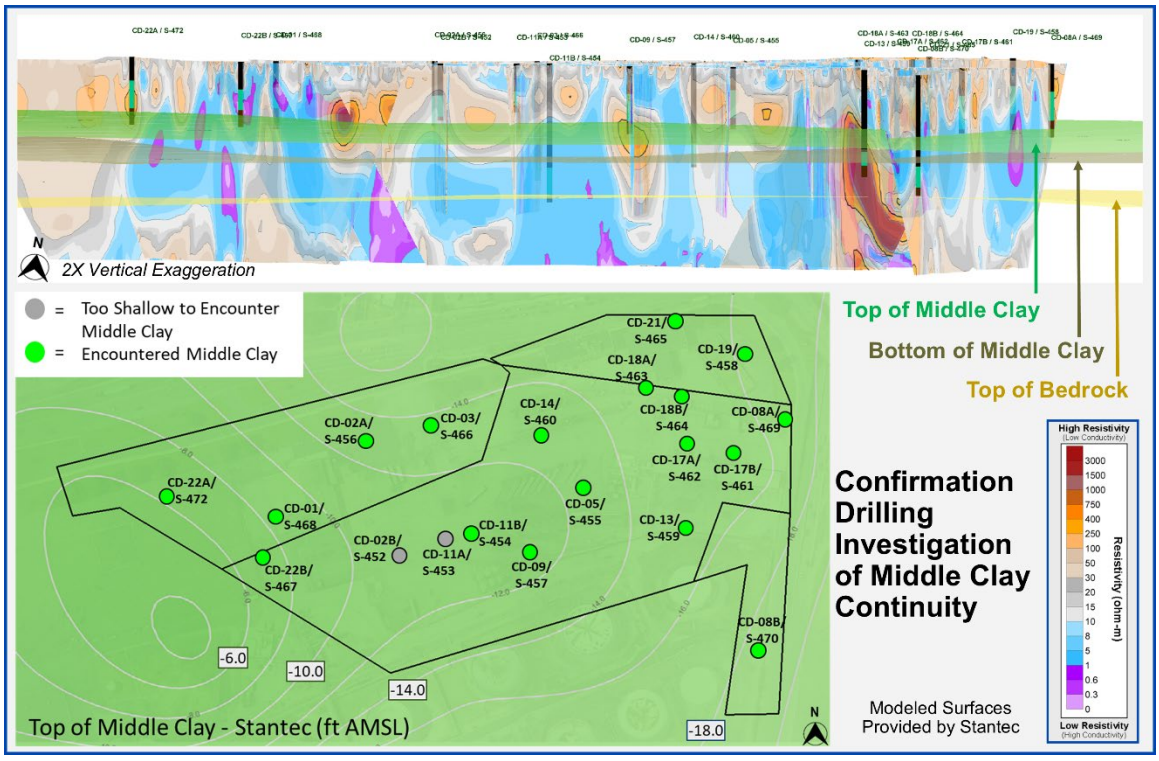
5.0 CONCLUSIONS AND CONCEPTUAL SITE MODEL (CSM) UPDATES

Aestus performed its 5-Step GeoTrax CSM+™ process collaboratively with Stantec's project team to successfully develop a high data density, robust, updated CSM for the Belmont Terminal Site. Integration of historical and confirmation drilling data with GeoTrax Survey™ image data in 2D (report Figures) and 3D visualization model (Appendix D) allowed robust data interpretation using multiple lines of evidence in the correct geospatial context. Data interpretation and conclusions relative to project objectives, are discussed in the entirety of Section 5.0 of this report in the following subsections:

1. Updated Geology CSM
2. Updated Hydrogeology CSM
3. Updated Bioactivity CSM
4. Updated Contaminant CSM
5. Interpreted Site Zones (for Remedial Strategy & Targeting)
6. Summary of Conclusions Relative to Overall Project Objectives

© 2022 Aestus, LLC



5.1 Updated Geology CSM

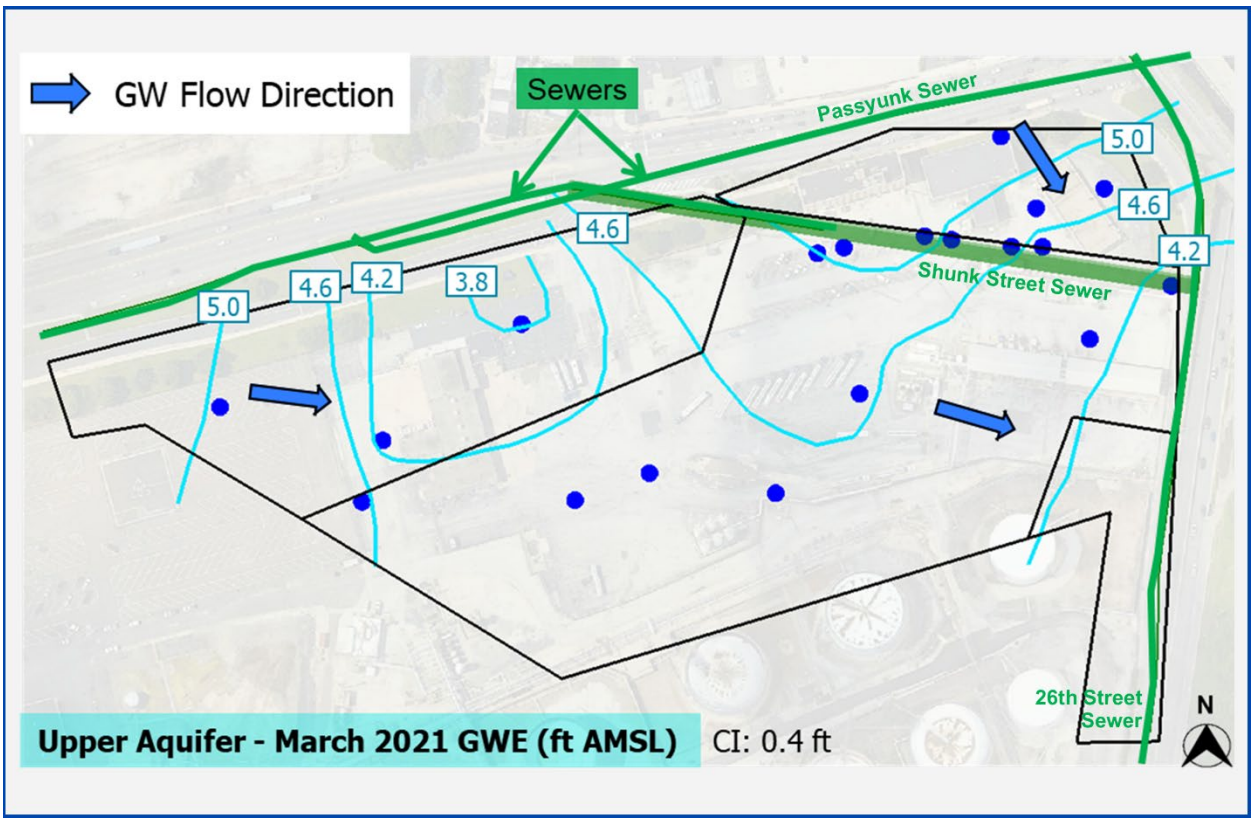
The following is a summary of Aestus' understanding of the historical site geologic CSM of relevance for the investigated area:

- Ground surface to ~ 45 feet BGS: Fill, alluvium, and sands
- ~45 to ~65 feet BGS: Middle Clay Unit
- ~65 to ~100 feet BGS: Sand/gravel layer
- ~100 feet BGS: Bedrock encountered

Stantec's modeled middle clay and bedrock surfaces were integrated in Aestus' 3D visualization model and the 2D figures and align with electrical resistivity breaks in the GeoTrax Survey™ data (see Inset Graphic 3 below). In some areas of the subsurface, electrical anomalies vertically cross the clay layer (e.g., on PHL-08, the resistive anomaly located laterally ~560 feet from Electrode 1 targeted by CD-08B as shown on Figure 8.3). These vertical electrical anomalies were investigated in the confirmation drilling program as potential zones of middle clay discontinuity.

Eighteen of the twenty CDs confirmed the presence of the middle clay unit, see Inset Graphic 3 below. The other two CD locations (CD-02B/S-452 and CD-11A/S-453) were not drilled to the expected depth of the middle clay unit and, as anticipated, did not encounter the unit. In conclusion, the integrated GeoTrax Survey™ electrical resistivity and boring log data support the presence of a continuous middle clay unit across the area of imaging.

Inset Graphic 3 – Confirming Continuity of Middle Clay Layer



© 2022 Aestus, LLC

5.2 Updated Hydrogeology CSM

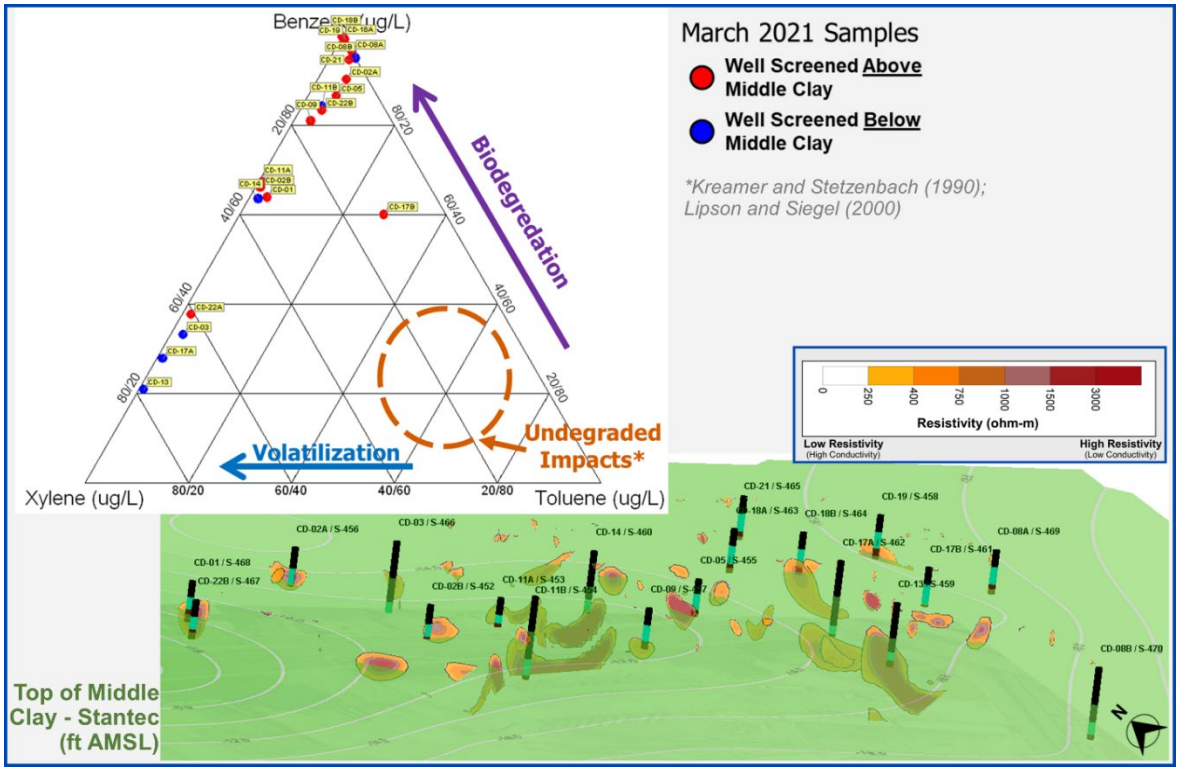
Groundwater flow in the upper aquifer at the Belmont Terminal Site is complex due to the influence of several factors including a flat coastal plain setting with tidal fluctuation, nearby sewer lines, and remediation systems. At the time the CDs were gauged for fluid levels in March 2021, several notable trends were present in the horizontal groundwater gradient (see Inset Graphic 4 below):

- On-site flow from the northeast
- On-site flow from the northwest
- The sewers appeared to be influencing the groundwater elevation

The middle clay unit acts as a geologic control on groundwater flow and appears to function as a semi-aquitard impeding vertical communication despite the presence of a downward vertical gradient based on site monitoring well data. Additional evidence for limited vertical communication across the site is discussed in more detail in Sections 5.3 and 5.4.

Inset Graphic 4 – Complex Upper Aquifer Horizontal Groundwater Gradient

© 2022 Aestus, LLC



5.3 Updated Bioactivity CSM

Evidence of contaminant biodegradation exists across the Belmont Terminal Site. Overall, the Belmont Terminal site is very electrically conductive with a median value of 16 ohmmeters. From Aestus' experience on 200+ sites, electrically conductive zones measuring less than 10 ohmmeters (blue and purple-colored zones on Figures) is typically indicative of bioactivity. More electrically resistive signatures (i.e., greater than 250 ohmmeters shown as orange and burgundy-colored zones on Figures) are typically indicative of gaseous phase zones resulting from bioactivity, very dry/coarse geology, or undegraded NAPL-related impacts. The levels of electrical conductivity present on this site were expected by Aestus given that it is an older, weathered, refinery site with limited undegraded impacts.

In addition, Inset Graphic 5 below contains a ternary diagram showing relative concentrations of benzene, toluene, and xylenes (i.e., from March 2021 CD sampling event) helps degradation mechanisms occurring at various depths:

- Shallow (i.e., screened above the Middle Clay, 0 to 40 feet BGS; colored as red dots in the ternary diagram)
- Deep (i.e., screened below the Middle Clay, 40 feet BGS and below; colored as blue dots in the ternary diagram)

The groundwater samples from the CD program did not contain any undegraded signatures. In addition, these data indicate that volatilization of contaminants tends to be more prevalent below the middle clay and biodegradation of contaminants appears to be most significant above the middle clay.

Inset Graphic 5 – Ternary Evaluation of Contaminant Degradation and Spatial Distribution of Electrically Resistive Zones

© 2022 Aestus, LLC

The site appears to be electrically divided with the majority of electrical resistors > 250 ohm-meters (dark orange and burgundy-colored zones in Figures) appearing below the middle clay surface, see Inset Graphic 5 above. As stated above, electrical resistors of this value are typically indicative of the presence of gases in the subsurface, but the wells screened below the middle clay had relatively low methane detects, see Inset Table 1 below, and limited impacts (see Section 5.4 for further discussion on impacts). A quick screening of the deeper-screened well heads for other gases in May 2022 revealed CO_2 concentrations as high as 18,700 ppm (in well CD-14/S-460), indicating the strong electrical resistors at depth are likely due to build-up of CO_2 that is trapped beneath the middle clay.

Furthermore, concentrations in groundwater of several ions and gases demonstrate a distinct geochemical difference across the middle clay. A subset of these is detailed in Inset Table 1 below. The highest concentrations of methane and nitrogen were found to be present in the wells screened above the upper clay, indicating methanogenesis appears to be ongoing in the shallow subsurface (< 40 ft BGS). Wells screened below the middle clay, however, had the highest sulfate concentrations and limited methane production. The presence of CO_2 in those well heads could be an additional indicator of a different degradation process occurring at depth.

*All samples are from Mar. 2021 CD Sampling Event. Averages rounded to two significant figures.	**Methane (µg/L)**	**Nitrogen (µg/L)**	**Sulfate (µg/L)**
Average Concentration **Above Middle Clay***	9,400	2,600	42,000
Average Concentration **Below Middle Clay***	17	200	250,000

Inset Table 1 – Select Biogeochemistry Results Above and Below the Middle Clay

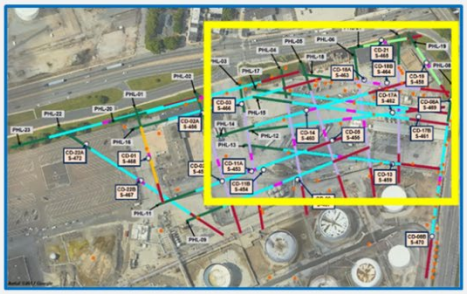
5.4 Updated Contaminant CSM

This section discusses integrated GeoTrax Survey™ imagery and targeted confirmation drilling data relative to updating the contaminant CSM including identifying vertical and horizontal extent of impacts and how the impact CSM is influenced by site geology/hydrogeology factors discussed in the previous sections.

5.4.1 Vertical Extent of Impacted Zones

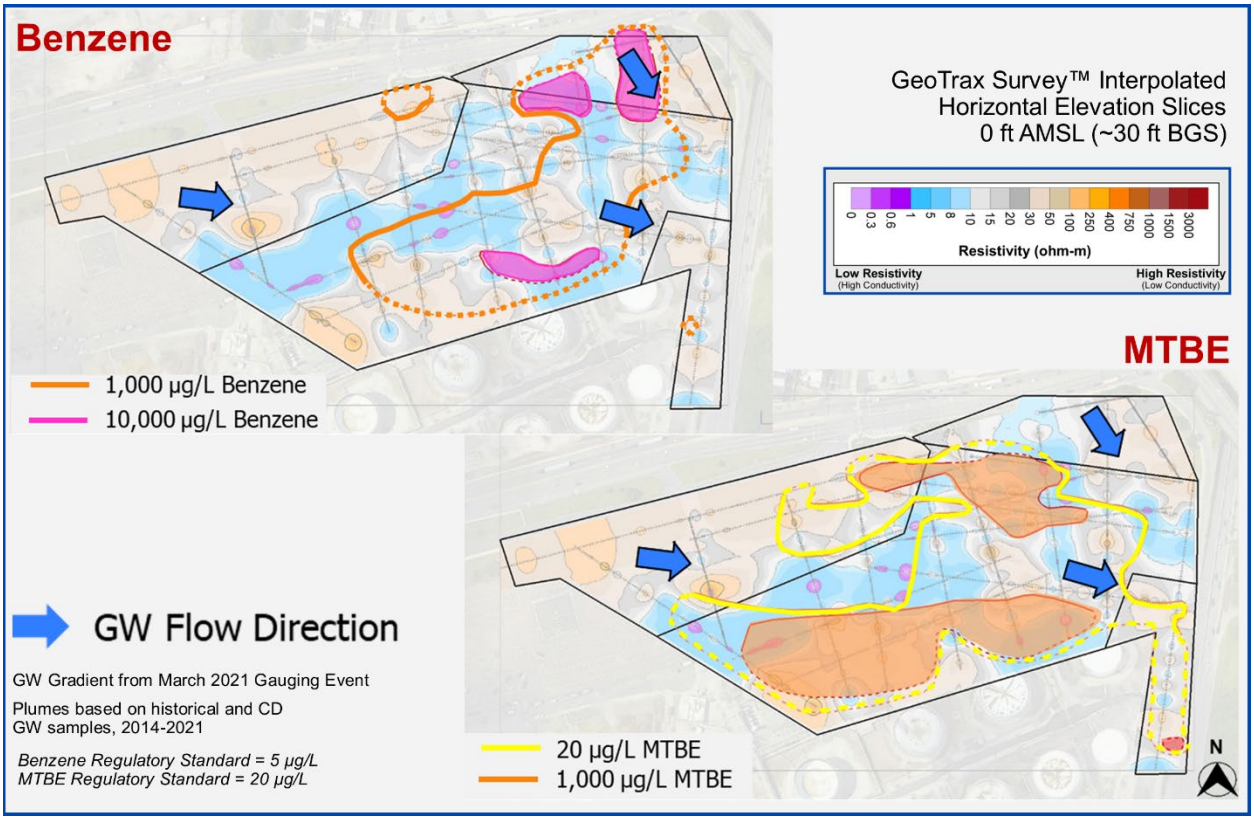


The vertical extent of impacts is influenced heavily by the middle clay unit. Similar to the apparent partitioning of upper and lower microbiomes, contaminant concentrations are distinct above and below the middle clay, note the difference in benzene concentrations in Inset Graphic 6 below. In general, impacts above the middle clay are much more prevalent than below the middle clay: no MTBE concentrations above regulatory standard were detected below the middle clay while benzene concentrations were an order of magnitude less than concentrations above the middle clay, see the table in Inset Graphic 6. In addition, all of the maximum PID readings from the CD program occurred above the middle clay and no signs of free product were found below the middle clay.

The electrical resistivity anomalies that were of potential concern extending through or below the middle clay were investigated and the data suggest there are not significant contaminants of concern below the middle clay or discontinuities of concern in the middle clay unit. In conclusion, even though the benzene concentrations are above standard below the middle clay, the continuity of the middle clay unit coupled with how minimal the deeper impacts are (when compared with the concentrations above the middle clay) indicate that focusing remediation efforts above the middle clay would be effective.

	Benzene (µg/L)	MTBE (µg/L)
Max **Above** Middle Clay	120,000	3,700
Max **Below** Middle Clay	39	9.5

Benzene Regulatory Standard = 5 µg/L
MTBE Regulatory Standard = 20 µg/L
No regulatory standard for methane
Values from Mar. 2021 Sampling Event



Inset Graphic 6 – Vertical Partitioning of Contaminant Concentrations

© 2022 Aestus, LLC

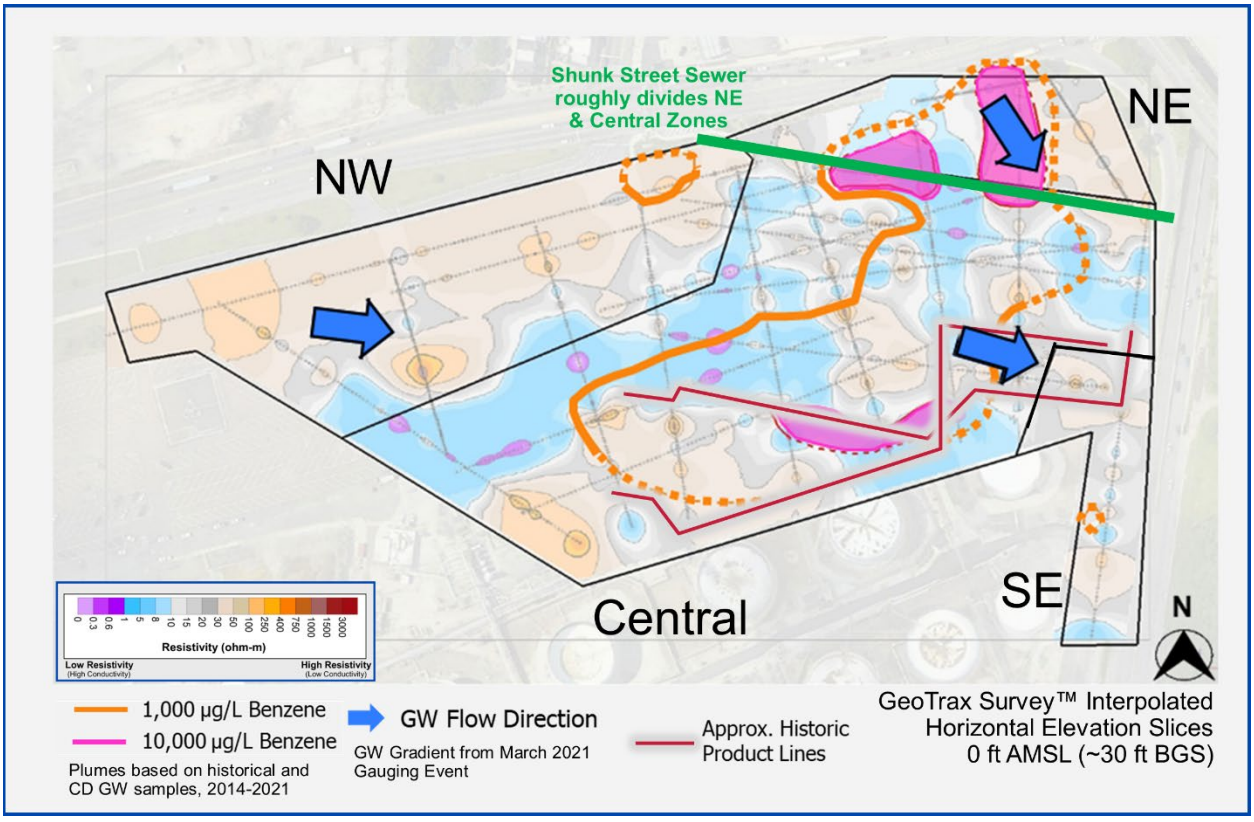
5.4.2 Horizontal Extent of Impacted Zones

Aestus understands that the Belmont Terminal site has historically had free product in wells with thicknesses up to 20 feet. The greatest NAPL thicknesses appeared to be focused along the Shunk Street sewer and the product lines (a known source); locations shown in Figure PV-2 and Inset Graphic 7 below. As of the date of this report, Aestus is not aware of any free product currently existing in the historical and CD monitoring wells based on recent 2021 gauging data

Regarding dissolved phase impacts, benzene concentrations over regulatory standard (5 µg/L) extend across the imaging domain. The distribution of the higher concentrations of benzene (i.e., the orange contour line representing > 1,000 µg/L) and MTBE over regulatory standards (i.e., the yellow MTBE contour line representing > 20 µg/L) appear to be heavily influenced by the site groundwater flow as shown in Inset Graphic 7 below.

Inset Graphic 7 – Lateral Extent of Impacts

The highest concentrations of benzene (i.e., pink-colored zone representing > 10,000 µg/L) and MTBE (orange-colored zones representing > 1,000 µg/L) are located around the historic pipeline (known historic source in the southern part of the Central Site Zone) and the Shunk Street sewer along the northeast and central zone boundary.



© 2022 Aestus, LLC

5.5 Interpreted Site Zones (for Remedial Strategy & Targeting)

Integrated GeoTrax Survey™ electrical resistivity and well hydrogeochemistry data revealed four distinct zones across the site that Aestus characterized as follows (see Inset Graphic 8 below):

- Northeast Zone: Intermediate electrical resistivity values with higher benzene concentrations and no MTBE
- Northwest Zone: Electrically resistive with less-weathered impacts
- Central Zone: Variable electrical resistivity values and weathered refinery impacts; historic product lines were located across the southern section of this zone and 2019 free product was present only in this zone
- Southeast Zone: Limited data available but currently lower refinery impacts than rest of site

Dividing the site into different zones is helpful for remedial strategy considerations. For example, Aestus understands Stantec has collected other lines of evidence which indicate some percentage of petroleum compounds found on site may originate from one or more off-site sources (e.g., manufactured gas plant site located immediately upgradient and proximal to the site's northwest zone which could contribute to this zone's distinct characteristics).

Inset Graphic 8 – Interpreted Site Zones

© 2022 Aestus, LLC

5.6 Summary of Conclusions Relative to Overall Project Objectives

The project objectives discussed in Section 1.1 of this report were achieved, and interpretation of the updated CSM resulted in the following conclusions:

- ✓ Site was delineated into four electrically and geochemically distinct zones (i.e., Northeast, Northwest, Central, and Southeast) to assist with remedial strategy and targeting (see Section 5.5 above)
- ✓ Stratigraphy mapping was further refined regarding aquitard (i.e., middle clay) extent and potential water-bearing unit connectivity; the middle clay unit was confirmed to be continuous across the site and vertical communication across the middle clay unit appears to be limited.
- ✓ Bioactivity was assessed across the site using GeoTrax Survey™ data and groundwater chemistry analysis as markers for degradation; the middle clay unit functions as a microbiome partition with methanogenesis occurring above the middle clay and CO_2 production (and other processes) likely occurring below the middle clay layer
- ✓ Vertical extent of NAPL related impacts appear to exist predominately above the middle clay unit with no evidence of free product below the middle clay; however, some benzene impacts over regulatory standards exist below the middle clay unit
- ✓ Horizontal extent of NAPL related impacts appear to be controlled by the variable groundwater gradient as well as potential offsite impacts migrating onto the site and influence from sewers relative to the distribution of the highest benzene and MTBE concentrations; specifically:
    - MTBE is largely constrained within the mapped Central Zone.
    - Benzene is of greatest concern in the Northeast Zone, along the Shunk Street Sewer, and in the southern portion of the Central Zone.
    - The benzene plume above regulatory standards (> 5 µg/L) extends across Aestus imaging domain including at the edges which indicates that horizontal extent is not fully bounded relative to aqueous phase impacts

This resulting updated CSM based on many lines of evidence is intended to assist Stantec and Evergreen with facilitating more targeted and cost-effective remediation of the Belmont Terminal Site and indicates that bio remedies should be considered.

6.0 RECOMMENDATIONS

This section provides Aestus' recommendations moving forward, based on the results and conclusions developed from our work.

6.1 In Person or Web Conference Meeting Review

Because this report discusses a complex site and multiple data sets encompassing thousands of field data points, Aestus is available to meet with Stantec and other project stakeholders to review conclusions contained in this report and address technical questions regarding the data sets. Use of the information contained in this report for planning future drilling and/or remediation work at the site could also be discussed. A web conference format for this meeting could be used if an in-person meeting is not feasible.

6.2 3D Visualization Model Review

To be able to fully understand the integrated imaging and drilling data sets and visualize them in a robust manner in 3D, Aestus recommends the reader use the provided free 3D visualization model viewer (see Appendix D) to view integrated site data more closely on-screen and from different perspectives. The screen capture graphics from the 3D visualization model shown within the above text sections of this report may not provide a complete understanding of the available integrated site data.

6.3 Use of GeoTrax CSM+™ Conclusions for Future Site Work

Because the data sets discussed in this report are ultra-high data density and have been helpful to develop a robust updated CSM for the Belmont Terminal Site, Aestus recommends Stantec use the findings and data contained in this report to guide additional site characterization and/or remediation work at the site.

6.4 Ongoing Project Support

Aestus will remain available to discuss how the data sets integrated during subsequent phases of this project can assist Stantec with further data integration and interpretation work, should any additional confirmation drilling and/or remediation activities be performed at the Belmont Terminal Site.

Analytical Data

Analytical Soil, Water, and Groundwater Quality Parameters and site standards for Wells Near GeoTrax Surveys ™ provided by Stantec.
Standards for groundwater: PADEP Non-Residential (Non Residential) Statewide Health Standard MSCs for aquifers (TDS <= 2500). Standards for soil: PADEP Non Residential Direct-Contact Values

Bold: Constituent concentration exceeds Standards
J: Estimated value
B: Analyte detected in blank as well as in sample
U: Analyzed for but not detected
F: Result suspect
H: Qualified due to holding time violation
L: Qualified due to accuracy issues (LCS recoveries outside control limits)
Q: Problem with associated field QC sample

NA: Not Analyzed
ND: Non Detect from lab

Well Gauging Data		
Well		MW-44
Sample Date		5/8/17
Parameters	*Units*	
Depth to Water	ft btoc	26.14
Depth to LNAPL	ft btoc	26.11
Product Thickness	ft	0.03
Product Density		0.7802

Dotted utility symbols mark measured feature from historic site maps or a noted "possible" utility from Aestus field notes. Solid utility symbols indicate feature marked in field and added to field notes.

General Notes: *Locations of site features (e.g., utilities, wells, etc.) are approximate*

Legend and Symbols

(for reference when reviewing all Figures)

Unified Soil Classification System

Gravels:
GW: Well graded gravels, gravel-sand mixtures, little or no fines
GP: Poorly-graded gravels, gravel-sand mixtures, little or no fines
GM: Silty gravels, gravel-sand-silt mixtures
GC: Clayey gravels, gravel-sand-clay mixtures

Sands:
SW: Well-graded sands, gravelly sands, little or no fines
SP: Poorly graded sands, gravelly sands, little or no fines
SM: Silty sands, sand-silt mixtures
SC: Clayey sands, sand-clay mixtures

Silts and Clays (liquid limit < 50%):
ML: Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
CL: Inorganic clays or low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
OL: Organic silts and organic silty clays or low plasticity

Silts and Clays (liquid limit > 50%):
MH: Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
CH: Inorganic clays of high plasticity, fat clays
OH: Organic clays of medium to high plasticity, organic silts

Highly Organic Soils:
PT: Peat and other highly organic soils

Aestus, LLC

GeoTrax CSM+™ Process

We Are Here

1 Data Transfer to Aestus

- Visualize historic site data using *GeoTrax Viz*™

2 Ultra-High Resolution Scan

- Acquire *GeoTrax Survey*™ 2D Imagery
- Use dynamic work strategy with QA/QC

3 Interim Report (w/Hypotheses)

- Integrate data sets in 2D&3D (*GeoTrax Viz*™)
- Select confirmation drilling locations

4 Confirmation Drilling (by Client)

- Perform targeted drilling/sampling to test CSM

5 Final CSM+ Report

- Integrate confirmation data (*GeoTrax Viz*™)
- Finalize GeoTrax CSM+™

(for reference when reviewing all Figures)

Site Features

Indicates various site features which are labeled accordingly on the figures

Former Product Piping *

Demolished building footprint

Light pole

Vapor Recovery Unit

Fence

Above ground pipes

Overhead Pipes with Electric Support

STA-02

Indicates areas where GeoTrax Surveys™ intersect

* *Former Product Piping Includes Piping for: Solvents, Imperial Gasoline, Regular Gasoline, Kerosene, Diesel, Fuel Oil*

Groundwater sample from a specific interval/screen interval

Water sample where one or more constituents are above standards

Groundwater sample from a specific interval/screen interval

Water sample where one or more constituents are above standards

Soil sample from a specific interval

Soil sample where one or more constituents are above standards

Soil Forensics Data available

Groundwater Bio Sample

Analytical Data

Analytical Soil, Water, and Groundwater Quality Parameters and site standards for Wells Near GeoTrax Surveys ™ provided by Stantec.
Standards for groundwater: PADEP Non-Residential (Non Residential) Statewide Health Standard MSCs for aquifers (TDS <= 2500). Standards for soil: PADEP Non Residential Direct-Contact Values

Bold: Constituent concentration exceeds Standards
J: Estimated value
B: Analyte detected in blank as well as in sample
U: Analyzed for but not detected
F: Result suspect
H: Qualified due to holding time violation
L: Qualified due to accuracy issues (LCS recoveries outside control limits)
Q: Problem with associated field QC sample

NA: Not Analyzed
ND: Non Detect from lab

LEGENDS AND SYMBOLS

© 2022 Aestus, LLC

Legend and Symbols

(for reference when reviewing all Figures)

Unified Soil Classification System

Gravels:
GW: Well graded gravels, gravel-sand mixtures, little or no fines
GP: Poorly-graded gravels, gravel-sand mixtures, little or no fines
GM: Silty gravels, gravel-sand-silt mixtures
GC: Clayey gravels, gravel-sand-clay mixtures

Sands:
SW: Well-graded sands, gravelly sands, little or no fines
SP: Poorly graded sands, gravelly sands, little or no fines
SM: Silty sands, sand-silt mixtures
SC: Clayey sands, sand-clay mixtures

Silts and Clays (liquid limit < 50%):
ML: Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
CL: Inorganic clays or low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
OL: Organic silts and organic silty clays or low plasticity

Silts and Clays (liquid limit > 50%):
MH: Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
CH: Inorganic clays of high plasticity, fat clays
OH: Organic clays of medium to high plasticity, organic silts

Highly Organic Soils:
PT: Peat and other highly organic soils

A. INTRODUCTION

This Appendix provides Aestus' clients and other readers of this report (hereby referred to as "client") more detailed discussion regarding Aestus' GeoTrax CSM+™ ultra-high resolution site characterization and conceptual site model (CSM) development process shown graphically below in 5 major steps:

This process involves the following three services provided by Aestus:

1. Aestus' specialty GeoTrax Survey™ subsurface imaging technology designed specifically for the environmental cleanup industry to be able to locate contaminants and preferential flow pathways in the subsurface.
2. Aestus' GeoTrax Viz™ process involves robust integration of both our imaging data and historical and confirmation drilling data into 2D report figures and a 3D visualization model (using Rockworks™ software)
3. Aestus' GeoTrax CSM+™ process involves iterative interpretation of electrical image signatures relative to chemistry, hydrogeology, and biology of the subsurface with the intent of generating and updated 3D site CSM based on the combined drilling and imaging data. Conclusions are generated collaboratively with our client relative to project objectives moving forward and to provide input for remedial design in anticipation of remedial action ultimately.

For site specific discussions and conclusions, please refer to the main body text section and other primary sections of this report.

A.1 GeoTrax Survey™ Subsurface Imaging Technology Overview

Electrical resistivity measurements have been used since the 1830's to interpret the earth. Electrical resistivity imaging (ERI) works by imparting an electrical current into the ground, and then measuring voltage at one or more other locations along a straight survey line/transect. Based on these data, the apparent resistivity of subsurface materials is calculated using Ohm's Law. These measurements are then inverted to provide measurements of model resistivity or true resistivity at regular points. For this report, these data will be referred to as resistivity data or electrical resistivity data.

Similar to a single pixel in a digital photo, a single resistivity measurement does not yield significant information. However, modern ERI acquisition instruments combined with modern computer processing speeds facilitate hundreds or thousands of resistivity measurements in a short timeframe. These measurements are performed along a survey alignment and are subsequently used to produce a two-dimensional (2D) electrical image (analogous to a CAT-scan in the medical industry) of the subsurface that graphically illustrates the presence or absence of subsurface anomalies and provides quantitative measurements of the subsurface resistivity. The 2D continuous images help minimize or eliminate interpolation between 1-D data points such as soil borings or wells, and assists in confirming or redefining the conceptual site model.

Our GeoTrax Survey™ technology is based on conventional ERI equipment. However, we have worked with Oklahoma State University (OSU) to vastly improve this technology and make it useful for the environmental industry. Aestus is currently the sole worldwide licensee of trade secret intellectual property from OSU that provides proprietary data collection algorithms and processing software to achieve Quality Assurance/Quality Control (QA/QC) data collection, higher data quality, and ultimately increased image quality, relative to standard ERI technology. In addition, we are able to successfully image subsurface anomalies at sites on which competing technologies such as ground penetrating radar and electromagnetic surveys either fail to perform or simply do not have sufficient resolution to achieve the project objective.

Because GeoTrax Survey™ is not a quantitative analytical chemical sampling tool and most environmental sites on which we acquire data have regulatory drivers that are chemical concentration based, Aestus employs our GeoTrax Viz™ process (see Section E.1) to integrate historical and follow-up confirmation drilling data with our 2D images and 3D visualization model. This process allows us to effectively "convert" or calibrate our electrical resistivity data back to chemical, physical and biological site parameters of interest to our clients. Aestus is often successful at developing a semi-quantitative relationship between subsurface resistivity values and concentrations of contaminants. As the site complexity increases, Aestus ability to develop these semi-quantitative relationships sometimes decreases.

The following sections of this report summarize the Aestus' field work, data collection, and data processing activities. Please refer to the primary sections of this report which provide our interpretations, conclusions, and recommendations based on the results of our work.

B. GEOTRAX SURVEY™ SUBSURFACE IMAGING FIELD WORK

This section describes Aestus GeoTrax Survey™ data acquisition field work.

B.1 Equipment Layout, Land Surveying, Documentation

Each survey is conducted by installing 56 specialized electrodes into the ground along a straight line and at a specific interval as indicated below. The spacing used on each line is determined based on the site plan and adjusted on-site, if needed, to provide the appropriate depth of imaging and/or to conform to lateral space constraints due to buildings, busy streets, property lines, etc.

The electrode stakes are connected via geophysical cables and the cables are connected to Aestus' data acquisition field instruments. Electrical resistivity data from the subsurface is then collected as described below in the Data Collection Section B.2.

Topography data for Aestus survey line locations are collected by Aestus personnel using professional land survey equipment (i.e., typically Topcon RTK GPS and/or robotic total station). These data are used to assist Aestus in locating our surveys in plan view on the site base map/aerial photo and performing a topographic correction to our survey images as discussed below in the Data Processing Section C.

To aid Aestus' client in locating the GeoTrax Survey™ locations during any follow-up drilling work that may be performed, Aestus marks the end points of each line with either a yellow disc bearing the inscription "GeoTrax Survey™ ID" (for end points in grassy areas), or steel nails with brass survey markers (for end points in asphalt or concrete). A metal detector may be used to locate each GeoTrax Survey™ line should additional confirmation borings be advanced along one or more survey lines in the future. A picture of the different types of survey markers are shown below:

Brass Survey End Point Marker

GeoTrax Survey™ Endpoint Marker

Tables included with this report contain the following geospatial information:

- Coordinates for the endpoints (i.e., Electrode Nos. 1 and 56) of each survey line at the site were collected by Aestus personnel using land survey techniques (i.e., total station)
- Distance along each survey line to each electrode location (relative to Electrode No. 1)

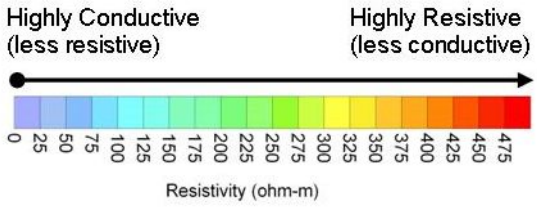
Aestus also records detailed field notes that show a sketch of each survey and surrounding site features (e.g., utility locations, buildings, monitoring wells, etc.) and the distance of these site features from our survey lines. A copy of Aestus' field notes is provided for reference in

Appendix C to this report and for assistance with locating survey lines in the field during any follow-up confirmation drilling work that may be conducted.

Finally, as part of Aestus field work documentation, each survey location is photographed along the survey alignment from different vantage points during data collection. Select photographs are included as Figure 8 in the main report, while a full set is included as Electronic Appendix E-1. These photographs can also be used to field locate GeoTrax Survey™ lines.

B.2 Data Collection

Once each survey line is laid out in the field, Aestus' specialized field instruments collect a significant amount of data related to the electrical properties of the subsurface. Aestus uses our proprietary techniques to collect significantly more and better quality data than other firms using similar looking equipment and we have a focus on quality control measures not commonly employed in geophysical approaches.



These data are partially processed in the field to evaluate data quality. Full data processing, and visualization work is performed in Aestus' offices as discussed in the following section.

C. DATA PROCESSING

Following field data collection, Aestus uses our proprietary data processing techniques to develop a final electrical resistivity image of the subsurface for each survey. This section describes the data processing work that is performed.

The raw data files collected in the field are fully processed, including a review of data quality from the data set to promote generation of high quality subsurface images and an additional QA/QC check of the acquired field data. A final image for each survey is developed, which contains a model of the electrical resistivity of the subsurface in units of Ohm-meters. Changes in topography along the survey lines are accounted for during this data processing work.

The final images are developed by contouring and plotting the resistivity data for each survey line using consistent color contouring schemes for Subject Site survey data to allow for evaluation of the results of all surveys on a comparative basis. In the case of the generic color contouring scheme example below (i.e., not specific to a particular site), the electrically conductive areas of the subsurface are illustrated by purple and blue colors and the electrically resistive areas of the subsurface are illustrated by yellow, orange, and red colors.

As part of our overall data quality control process, Aestus compiles resistivity data for an entire site and then normalizes the color contouring scheme (i.e., during our proprietary data post-processing phase) for all the images across the site. This allows consistency in the color contouring scheme, so a reviewer can correlate the results from one survey to the results from another survey performed on the same site during the same timeframe. The survey data are then output in six of our standard color schemes for preliminary internal (Aestus) review. These standard color schemes are evaluated during the data interpretation phase of each project and often times a more appropriate site-specific color contouring scheme is developed based on calibration to historical and/or confirmation drilling site data (see Section E.4).

The results of Aestus' survey work are discussed in the following sections of this report.

D. RESULTS (GEOTRAX SURVEY™ 2D SUBSURFACE IMAGES)

Aestus' geophysical survey work yields high quality/high resolution two-dimensional (2D) electrical resistivity images of the subsurface at a project site in select locations, as shown in the Figures section of this report.

The XYZR data files containing geo-referenced (i.e., X, Y, and Z coordinate data) resistivity (R) data sets that were used to color contour the abovementioned survey images are provided for Aestus' client as Electronic Appendix E-2 to this report.

These XYZR data were also used to generate a select few horizontal elevation slices (a.k.a., horizon maps) through the domain surveyed by Aestus (see 3D visualization model provided in Electronic Appendix E-3).

For a select few sites, either the GeoTrax Survey™ 2D images or data from a site monitoring well network will provide the data required to fulfill the project objectives and develop a solid conceptual site model. However, for most sites, Aestus' experience indicates that data integration of the geophysical images and conventional site investigation data (i.e., from monitoring wells, soil borings, etc.) into a 3D visualization model is necessary to interpret the collective data sets, develop a useful conceptual site model, and fulfill the project objectives. The following section of this report discusses data integration and data interpretation for a typical project.

E. GEOTRAX VIZ™ DATA INTEGRATION

This section discusses Aestus' GeoTrax Viz™ data integration work in preparation for GeoTrax CSM+™ data interpretation of GeoTrax Survey™ subsurface imagery and other site characterization data relative to developing a better understanding of subsurface site issues and updating the existing conceptual site model.

E.1 Data Integration Using Evidence-Based Concepts

From Aestus' perspective, the end goal of any environmental site characterization is to use all available data collected at a site to visualize the Earth's subsurface in 3D and understand where sources of contamination may exist and the distribution and mechanisms for contamination that may be migrating. This process is most useful if the end result provides a conceptual site model that is more quantitative with less extrapolation of data gaps, based on multiple data sets, and relatively easy to understand by different project stakeholders. To this end, Aestus has adapted an approach developed by both the medical and environmental industries called "Evidence-Based" evaluation. This approach uses all the available data to obtain a consistent quantitative site model that is tested by confirmation drilling and supported by the available evidence.

Our adaptation of this approach for use in the environmental industry is to get all available and geospatially relevant data into one place so that it can be viewed together rather than in separate pieces. For the typical site this includes using our GeoTrax Viz™ process to assemble geophysical data, monitoring well data, soil boring data (including PID data), indoor air quality data, utility line data, UST location data, etc. and posting these data onto our 2D GeoTrax Survey™ images, and also including as much of this information as practical into our 3D visualization software. Aestus uses Rockworks™ as our standard approach for 3D visualization on most projects.

As a corollary to the above definition of evidenced based evaluations, it is important to note that organizations using this approach have learned not to arbitrarily discard one or more particular data sets when these data do not appear to agree with other data sets. This happens frequently in the environmental industry when multiple consulting firms work on a particular site over a period of years, or decades and were not directly involved in the collection of each data set. However, these apparent mismatches are commonly not data errors, but variations between the ways various data types measure properties of the earth (and/or contaminants in the earth as in the environmental industry). Seasoned evidence based practitioners have learned empirically to investigate further when two or more data sets do not agree at a specific location at a site because the probability is high this will result in gaining useful knowledge about the site.

The first step in Aestus GeoTrax Viz™ process is to generate a framework (discussed below) for site data which facilitates calibration of our GeoTrax Survey™ electrical resistivity data/images against surface features (e.g., buildings or tanks) and known subsurface conditions at discrete points (e.g., monitoring well geochemistry). As discussed previously, this process is necessary to effectively "convert" our electrical resistivity data back to chemical, physical and biological site parameters of interest to our clients. Historical site data are incorporated into this framework in addition to Aestus' electrical resistivity image data and follow-up confirmation drilling/sampling data.

E.2 Data Integration onto GeoTrax Survey™ 2D Images

Aestus reviews site data provided by our client, and uses our GeoTrax Viz™ process to integrate the following historical site characterization data onto our 2D survey images as shown in the Figures section of this report, including but not limited to:

- Site features from field notes (Aestus' field crew)
- Monitoring well construction
- Boring log data
- PID data from soil borings
- Groundwater analytical data
- Groundwater quality parameter data
- Groundwater level data
- NAPL presence (if applicable), odor and staining notations from boring logs
- Historic plume maps
- Bioparameter data

Data from confirmation drilling/sampling work that targets specific anomalous zones detected in Aestus' subsurface imagery, is also integrated when it becomes available during the course of Aestus' engagement on the project.

E.3 Data Integration into 3D Model

GeoTrax Viz™ assists Aestus and our client's personnel with visualizing the GeoTrax Survey™ subsurface images as they relate to one another, Aestus used data collected from our 2D imaging process to generate a 3D representation of these data in the subsurface of a project site. We and our clients typically find that the results of the 3D visualization work are very helpful in providing a more complete and somewhat simplified understanding of the survey data/images, ultimately yielding a better understanding of the subsurface at a given site. The 3D visualizations are also very useful in explaining site conceptual models and features to both technical and non-technical stakeholders.

To allow viewing of our survey images to scale in 3D space, Aestus developed a technique to import and properly position and scale the survey images in 3D drawing space and relative to the site base map using Rockworks™ 3D visualization software. Although the perspective 3D views resulting from these efforts are based on 2D data sets (i.e., the individual electrical resistivity image data was not collected in 3D during the survey work), Aestus has a higher confidence in our approach relative to the conventional approach of using only 1-D monitoring well data points and the resulting interpolations between these discrete points.

For Aestus' 3D visualization work, thousands of field data points (collected in 2D) were used as input to develop the 3D perspective views. Other data imported into Aestus' 3D model for a project site include but are not limited to the following:

- GeoTrax Survey™ transect locations and identification labels

- GeoTrax Survey™ vertical 2D images
- Horizontal elevation slices (though GeoTrax Survey™ data)
- Site monitoring wells
- Aerial photo(s)
- Various site maps (provided by Aestus' client)
- Groundwater level data
- Analytical data from groundwater samples
- Analytical data from soil samples

As mentioned above, for the data integrated into the 2D survey images, it is important to understand that not all of these data sets integrated into 3D are exactly aligned temporally and/or spatially.

A few representative 3D model generated views of the survey images representing the subsurface of sites are provided as shown in the main body of this report. The GeoTrax Survey™ images shown in these 3D perspective views are presented in one or more custom site specific color contouring schemes as discussed below in Section E.4.3 (Discussion of Multiple Color Schemes in 3D).

Because the 3D visualization work performed by Aestus was extensive and many different views of these data can be generated using this tool, it is not practical to provide all of these views as part of the hardcopy report. However, Aestus is providing a copy of our 3D model files for viewing by our client's personnel using a free viewer provided by Rockworks™. This data and instructions on downloading and using the free viewer software are contained in Electronic Appendix E-3 to this report.

F. GEOTRAX CSM+™ DATA INTERPRETATION AND UPDATED CSM

As discussed in Section E, Aestus integrates multiple data sets in 2D report figures and our 3D visualization model to facilitate our GeoTrax CSM+™ robust data interpretation work based on ultra-high data density and multiple lines of evidence. It should be noted that interpretations presented in the accompanying report are based on information available as of the date of this report and applying Aestus' professional judgment based on experience imaging other similar project sites.

The end goal is to develop the most appropriate color contouring scheme(s) for the electrical resistivity data that best highlights zones of interest in the subsurface (e.g., contaminated versus clean conditions). Each site that Aestus images is different electrically due to varying hydrogeology, types and concentrations of contaminants, etc., this is an iterative process that is very site specific. This process is supported by use of the GeoTrax Viz™ approach.

F.1 Color Contouring Electrical Resistivity Imaging Data

Upon completion of the data processing work discussed in Section C of this report, the resistivity data set is fixed and is not modified from that point forward. However, Aestus does modify the color contouring scheme(s) used to effectively contour these data (i.e., show various ranges of resistivity detected at the site using different colors) to allow us and our clients to understand what the data means relative to properties of the subsurface that are of foremost interest to Aestus' clients (i.e., contaminant distribution, geology, presence of biological activity, etc.). The color modification process is similar to re-contouring a topographic map (i.e., the elevation points never change, but the contour interval is altered to produce different maps highlighting various features or ranges of resistivity).

This section provides an overview of the resistivity of common site features and contaminants and discusses the development of a site-specific color contouring scheme for a project site.

F.1.1 Resistivity of Common Site Features and Contaminants

The magnitude of subsurface resistivity values will vary from site to site based on a number of factors and is related to:

- Geological composition (i.e. competent bedrock, sand, etc.)
- Groundwater chemistry (i.e. dissolved phase contaminants biological activity, etc.)
- Contaminants contained/trapped in the pore spaces within the soil matrix (i.e. presence, or absence of NAPL, injectates, etc.)
- Presence or absence and magnitude of bioactivity in the subsurface
- Presence or absence of buried debris and structures (i.e. buried USTs, unknown landfill debris, etc.).

For a typical site, fine materials such as clay and silt are generally less resistive (i.e., more conductive) while coarse sand and gravel are generally more resistive (i.e., less conductive). Should the soil (clay or sand) be dry, it will appear more resistive when dry and less resistive when wet. Should a distinct groundwater table exist in the area being surveyed, the groundwater interface is often not seen as a sharp feature in the survey images because the

water content of the soil matrix above the water table is still near saturation leading to a resistivity gradient at the water table instead of a sharp boundary.

Additionally, the presence of contaminants within the pore matrix can overshadow (electrically) the presence of groundwater or degree of saturation. The presence of fractures in bedrock geology often appear as vertically oriented anomalies and may be either conductive or resistive depending on what type of fluid (e.g., clean groundwater and/or unweathered/weathered contamination) is present within the fracture. Bedrock interfaces are sometimes identifiable depending on the degree of weathering at the transition to bedrock, the degree of saturation, and the presence or absence of contamination.

Should buried tanks or other man-made structures be present coincident with survey line locations, they typically show up in our survey images as either low resistivity/highly conductive (metallic construction) or high resistivity/low conductivity (fiberglass, concrete or other construction). In areas where tanks or sumps have been removed or replaced, these areas may or may not present in our images as an anomaly depending on whether native or non-native fill soils were used as backfill. If contamination is present underneath former tanks and sump areas, it generally presents as described in the following paragraphs.

Subsurface areas impacted with fresh or unweathered light or dense non-aqueous liquids (LNAPLs or DNAPLs, respectively) and related dissolved phase contamination, typically present as more resistive anomalous zones relative to areas that contain only non-impacted soils and pore fluids. Based on our experience, areas containing NAPL impacted soils often present as a roughly spherical or lenticular blob shape (obloid) and will typically be identified in our survey images by more resistive values.

Sometimes, the presence of this type of contamination can cause a much less resistive (i.e., very conductive) anomaly or zone, particularly with weathered hydrocarbon contamination. Aestus believes the reason that weathered hydrocarbon contamination shows as electrically conductive zones in our images is naturally occurring bioactivity in the subsurface in contaminated zones that alters the electrical properties of these materials. This phenomenon is well documented in technical literature related to the study of LNAPLs in particular **(technical paper available upon request from Aestus).** Aestus' clients have drilled and confirmed the presence of hydrocarbon within electrically conductive anomalies at many different project sites.

The mechanism that causes DNAPL-related contamination (e.g., chlorinated solvents) to show as electrically conductive in our survey images is less clear with research conclusions being less definitive at the time of this report. However, technical papers exist that discuss byproducts of in-situ chlorinated solvent biodegradation containing chloride amongst other compounds. Aestus theorizes that the presence of chloride and/or other ions in zones of natural attenuation would likely create a very electrically conductive signature detectable by our GeoTrax Survey™ technology in many cases. Additionally, recent research indicates that active bacteria can generate nanowires between them which create an electrically conductive zone.

GeoTrax Surveys™ can normally identify areas impacted by dissolved concentration impacts to the groundwater from a former or existing source of contamination. Sometimes dissolved phase impacts do not present as anomalies because lower levels of dissolved phase contamination cause relatively small changes in electrical properties of the subsurface; therefore, having the potential to be masked by changes in resistivity signatures of various soil types that may exist across a typical site. Often, with lower dissolved phase concentrations, it is Aestus' experience

that electrically conductive anomalies occur where groundwater is flowing preferentially (and contamination is moving with the groundwater) which creates a condition where Aestus can locate lower level impacted zones.

F.1.2 Development of Site Specific Color Contouring Scheme

Upon posting of all available nearby soil boring and monitoring well data to our survey images and comparing these data to our survey data visualized in multiple preliminary color contouring schemes, Aestus generally develops a custom color contouring scheme that is used to color contour the resistivity data on each of the survey images.

Upon receipt of pending confirmation drilling data, Aestus anticipates that this color scheme will be updated/revised based on those data. Aestus then develops an Interpretive Electrical Resistivity Scale with interpretations of geologic variability and relative levels of contamination for our Final Report. For Interim Reports, a placeholder figure is included such that we can include this interpretive scale during generation of our Final Report.

F.1.3 Discussion of Multiple Color Schemes in 3D

For some sites, Aestus finds that it is helpful to isolate certain resistivity ranges to more easily explain certain interpretations of subsurface features. As discussed in Section E.4, the data is never modified once it is processed; only color contours representing electrical resistivity ranges are changed. Typical color contouring schemes shown in the 3D visualization model are described below (NOTE: not all color contouring schemes are used for all projects/reports and additional custom coloring schemes are also sometimes included as needed on a project specific basis):

- **Statistical Color Scheme:** This color scheme assigns each of 20 ranges of resistivity (i.e., "bins") a unique color; the resistivity ranges are determined statistically and include a 5% of the data points in each "bin". The spectrum of cool (purple) to warm (red) colors is used.
- **Custom Site Specific Color Scheme:** This color scheme highlights both the low end (i.e., highly conductive end) of the resistivity scale (in purple) and uses warm colors to highlight resistive anomalous zones detected.
- **High Resistivity Only Range**: Color contouring scheme highlighting relatively higher resistivity anomalous zones. This color scheme focuses on the high end (i.e., resistive end) of the resistivity scale and uses "warm" colors to highlight resistivity anomalies.
- **Mid-Range Resistivity:** Color contouring scheme highlights a specific range of resistivity that may be of interest relative to interpretation and project objectives (confirmed via confirmation drilling data)
- **Low Resistivity (High Conductivity) Only Range:** Color contouring scheme highlighting low resistivity anomalous zones. This color scheme focuses on the low end of the resistivity scale (i.e., conductive end) and uses "cool" colors to highlight conductive anomalies. If these areas are impacted, often the color will sometimes be converted to a warm color for final reporting to indicate remaining impacts.

F.2 Development of Updated Conceptual Site Model (CSM)

Upon review of integrated data sets in 2D and 3D, Aestus reviews the multiple lines of evidence and applies multiple color schemes to the electrical image data in an iterative manner to develop hypotheses regarding conceptual site model components (e.g., distribution of contaminants, preferential flow pathways and presence/absence of bioactivity, etc.). These hypotheses are submitted as preliminary conclusions at Aestus' Interim Report stage along with specific recommendations on where to perform confirmation drilling and sampling of anomalous zones detected by Aestus.

Once confirmation drilling program data is submitted to Aestus, we integrate and QC it using our GeoTrax Viz™ process. Then we move back into our GeoTrax CSM+™ data interpretation process to re-interpret the multiple lines of evidence along with the targeted confirmation drilling data and develop Final Report conclusions in consultation with our clients.

The GeoTrax CSM+™ Final Report conclusions are intended to inform the next step in the project based on ultra-high data density and multiple lines of evidence. Next steps may include application for technical impracticability waivers, application for monitored natural attenuation, or remedial design in preparation for an active remediation strategy.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-22543-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
XH	Surrogate recovery is above control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Client: Stantec Consulting Corp. Job ID: 410-22543-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Job ID: 410-22543-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-22543-1

Revision
The report being provided is a revision of the original report sent on 12/31/2020.

Revision History
Revision 1 - Update sample ID.
Revision 2 - Correct Total TPH Units.

Receipt
The samples were received on 12/2/2020 4:40 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-77139 recovered above the upper control limit for C4-C12-TPH-GRO. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260C: The following sample was analyzed outside of analytical holding time due to laboratory error: BT-02B-S-10-20201201 (410-22543-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: The 1,1,2,2-Tetrachloroethane (Surr) surrogate recovery for the following samples was outside acceptance limits (high biased) on the confirmation column due to matrix interference: BT-02B-W-28-20201202 (410-22543-2). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-22720-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
XH	Surrogate recovery is above control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-22720-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-22720-1

Revision
The report being provided is a revision of the original report sent on 12/23/2020. The report (revision 1) is being revised due to: Correct Total TPH units.

Receipt
The samples were received on 12/3/2020 5:29 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

GC/MS VOA
Method 8260C: Reanalysis of the following sample was performed outside of the analytical holding time due to laboratory error : BT-11A-S-8-20201202 (410-22720-1).

Method 8260C: Reanalysis of the following sample was performed outside of the analytical holding time due to laboratory error: BT-11A-S-32-20201203 (410-22720-3).

Method 8260C: The continuing calibration verification (CCV) associated with batch 410-77139 recovered above the upper control limit for C4-C12-TPH-GRO. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260C: The concentration reported for C4-C12-TPH-GRO includes a contribution from internal standard t-Butyl Alcohol-d10. Due to the nature of the sample matrix, this area could not be subtracted from the total GRO area for sample BT-11A-S-32-20201203 (410-22720-3) on analytical batch 410-77139.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: Surrogate recovery for the following sample was outside control limits: BT-11A-S-8-20201202 (410-22720-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015C_TPH: The method blank contained the C12-C22 range above the reporting limit (RL). Associated sample was not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank. BT-11A-W-29-20201203 (410-22720-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: The 1,1,2,2-Tetrachloroethane (Surr) surrogate recovery for the following samples was outside acceptance limits (high biased) on the confirmation column due to matrix interference: BT-11A-W-29-20201203 (410-22720-4). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job ID: 410-22720-1 (Continued)

Laboratory: Eurofins Lancaster Laboratories Env, LLC (Conti

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-22930-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
XH	Surrogate recovery is above control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Stantec Consulting Corp. Job ID: 410-22930-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-22930-1

Revision
The report being provided is a revision of the original report sent on 12/23/2020. The report (revision 1) is being revised due to: Correct Total TPH units.

Receipt
The samples were received on 12/4/2020 6:32 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.0°C

GC/MS VOA
Method 8260C: Surrogate recovery for the following sample was outside control limits: BT-11B-S-8-20201203 (410-22930-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: Surrogate recovery for the following sample was outside the upper control limits: BT-11B-S-8-20201203 (410-22930-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Stantec Consulting Corp. Job ID: 410-22930-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015C TPH	3546	Solid	>C12-C22 (1C)
8015C TPH	3546	Solid	>C22-C44 (1C)
Moisture		Solid	Percent Moisture
Total TPH		Solid	Total Reported TPH

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-23184-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-23184-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-23184-1

Revision
The report being provided is a revision of the original report sent on 12/28/2020. The report (revision 1) is being revised due to: Correct Total TPH units.

Receipt
The samples were received on 12/8/2020 5:18 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.2°C

GC/MS VOA
Method 8260C: Reanalysis (DL and DL2) of the following sample was performed outside of the analytical holding time due to laboratory error: BT-11B-S-50-20201208 (410-23184-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 5310C: The following sample was diluted due to the nature of the sample matrix: BT-11B-W-37-20201207 (410-23184-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-23368-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Narrative

Job Narrative
410-23368-1

Revision
The report being provided is a revision of the original report sent on 12/23/2020. The report (revision 1) is being revised due to: Correct Total TPH units.

Receipt
The sample was received on 12/9/2020 5:06 PM; the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.4°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Stantec Consulting Corp. Job ID: 410-23368-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015C TPH	3546	Solid	>C12-C22 (1C)
8015C TPH	3546	Solid	>C22-C44 (1C)
Moisture		Solid	Percent Moisture
Total TPH		Solid	Total Reported TPH

Method Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-23573-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
FL	MS and/or MSD recovery below control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Narrative

Job Narrative
410-23573-1

Revision
The report being provided is a revision of the original report sent on 12/29/2020. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The sample was received on 12/10/2020 4:44 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.2º C.

Receipt Exceptions

Analyte List Change - Corrected to >C12-C22

GC/MS VOA
Method 8260C: Surrogate recovery for the following sample was outside control limits: BT-05-S-9-20201210 (410-23573-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Stantec Consulting Corp. Job ID: 410-24132-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Job ID: 410-24132-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-24132-1

Revision
The report being provided is a revision of the original report sent on 12/29/2020. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 12/15/2020 5:39 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.8°C

GC/MS VOA
Method 8260C: Surrogate recovery for the following sample was outside control limits: BT-02A-S-10-20201214 (410-24132-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
H3	Sample was received and analyzed past holding time.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

HPLC/IC

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-24240-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-24240-1

Revision
The report being provided is a revision of the original report sent on 1/11/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 12/16/2020 4:20 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was -0.2°C

GC/MS VOA
Method 8260C: Surrogate recovery for the following sample was outside control limits: BT-09-S-22-20201216 (410-24240-2). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: Surrogate recovery for the following sample was outside the upper control limit: BT-02A-w-36-20201215 (410-24240-1). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8011: The following sample was analyzed outside of analytical holding time due to a trip blank sampling error. TB-20201216 (410-24240-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
Method 300_ORGFMS: The following sample was analyzed outside of analytical holding time for Nitrogen, Nitrate due to laboratory error: BT-02A-w-36-20201215 (410-24240-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM4500_S2_D: The following sample was diluted due to the nature of the sample matrix: BT-02A-w-36-20201215 (410-24240-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Job ID: 410-25174-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

HPLC/IC

Qualifier	Qualifier Description
E	Result exceeded calibration range.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-25174-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-25174-1

Revision
The report being provided is a revision of the original report sent on 1/11/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 12/29/2020 5:08 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.8°C

Receipt Exceptions
The container count for the following sample did not match the information listed on the Chain-of-Custody (COC): BT-09-W-32-20201228 (410-25174-2). The COC listed a container count of 19. Received 11 containers.

GC/MS VOA
Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: BT-19-S-15-20201229 (410-25174-4). The sample(s) was re-extracted and/or re-analyzed and ISTD response was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015C_TPH: Chlorobenzene (Surr) recovery for the following sample was outside acceptance limits: BT-09-S-47-20201229 (410-25174-3). The results have been reported per client request.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: The 1,1,2,2-Tetrachloroethane (Surr) surrogate recovery for the following samples was outside acceptance limits (high biased) on the primary column due to matrix interference: BT-09-W-32-20201228 (410-25174-2). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
FL	MS and/or MSD recovery below control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-25255-1

Narrative

Job Narrative
410-25255-1

Revision
The report being provided is a revision of the original report sent on 1/11/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 12/30/2020 4:35 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.5°C

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-82845 recovered above the upper control limit for t-Butyl alcohol. Non-detections of the affected analytes are reported. Any detections are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020A: The following sample was not filtered within 15 minutes of sample collection as required by the method: BT-19-W-40-20201230 (410-25255-3). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM4500NH3_C_Mod: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: BT-19-W-40-20201230 (410-25255-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

HPLC/IC

Qualifier	Qualifier Description
FH	MS and/or MSD recovery above control limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-25450-1

Revision
The report being provided is a revision of the original report sent on 1/19/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/5/2021 4:40 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.2°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020A: The following sample was not filtered within 15 minutes of sample collection as required by the method: BT-13-W-40-20210105 (410-25450-4). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

Method 6020A: The post digestion spike (PDS) and the serial dilution (SD) were outside of the acceptance criteria for the analyte lead on the associated prep batch 410-82597. However, the matrix spike (MS) and matrix spike duplicate (MSD) recovered within the acceptance criteria. Per method the PDS and SD are not required and were not reanalyzed. Therefore, the data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM4500NH3_C_Mod: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: BT-13-W-40-20210105 (410-25450-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Stantec Consulting Corp. Job ID: 410-25450-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015C TPH	3510C	Water	>C12-C22 (1C)
8015C TPH	3510C	Water	>C22-C44 (1C)
8015C TPH	3546	Solid	>C12-C22 (1C)
8015C TPH	3546	Solid	>C22-C44 (1C)
Moisture		Solid	Percent Moisture
Total TPH		Solid	Total Reported TPH
Total TPH		Water	Total Reported TPH

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-25584-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-25584-1

Revision
The report being provided is a revision of the original report sent on 1/17/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/6/2021 3:35 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.3°C

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-82845 recovered above the upper control limit for t-Butyl alcohol. Non-detections of the affected analytes are reported. Any detections are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Job ID: 410-25740-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.

GC Semi VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
^3+	Reporting Limit Check Standard is outside acceptance limits, high biased

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-25740-1

Revision
The report being provided is a revision of the original report sent on 1/22/2021. The report (revision 1) is being revised due to: Update TPH to report >C12-C22.

Receipt
The samples were received on 1/7/2021 5:15 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: The method blank for preparation batch 410-83820 contained Anthracene, Fluorene, Naphthalene and Phenanthrene above the method detection limit (MDL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank. The associated sample is BT-14-S-25-20210107 (410-25740-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015C_TPH: O-terphenyl surrogate recovery for the following sample was outside control limits: BT-14-S-25-20210107 (410-25740-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-25856-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-25856-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-25856-1

Receipt
The samples were received on 1/8/2021 3:23 PM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.6°C

Receipt Exceptions
The following samples were collected in an improper container: BT-14-W-44-20210108 (410-25856-1) and TB-20210105 (410-25856-2). 2 amber vials submitted peserved with H3PO4. This is for method 5310 (TOC) not Volatile Headspace Hydrocarbon, Chloride, Sulfate or Nitrate. The client was contacted regarding this issue, and the laboratory was instructed to proceed with analysis.

GC/MS VOA
Method 8260C_UST: The method requirement for no headspace was not met on analytical batch 410-86027. Due to the need for re-analysis, the container used for the following sample was previously opened and contained headspace: BT-14-W-44-20210108 (410-25856-1). The original sample container did not contain headspace.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
Method RSK_175: The method requirement for no headspace was not met. The following volatile sample was analyzed with significant headspace in the sample container(s): BT-14-W-44-20210108 (410-25856-1). Significant headspace is defined as a bubble greater than 6 mm in diameter.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Login Sample Receipt Checklist

Client: Stantec Consulting Corp.

Job Number: 410-25856-1

Login Number: 25856

List Source: Eurofins Lancaster Laboratories Env

List Number: 1

Creator: Colon Martinez, Jessenia C

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	False	Refer to Job Narrative for details.
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Client: Stantec Consulting Corp. Job ID: 410-26092-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Stantec Consulting Corp. Job ID: 410-26092-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Job ID: 410-26092-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-26092-1

Revision
The report being provided is a revision of the original report sent on 1/21/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The sample was received on 1/12/2021 4:30 PM; the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.7°C

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-84999 recovered above the upper control limit for t-Butyl alcohol. Non-detections of the affected analytes are reported. Any detections are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-26291-1

Revision
The report being provided is a revision of the original report sent on 1/29/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/13/2021 4:36 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.9°C

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-88275 recovered above the upper control limit for t-Butyl alcohol. Non-detects are reported. Any detection is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015C_TPH: Surrogate recovery for the following sample was outside control limits: BT-17B-S-45-20210113 (410-26291-3). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010C: Not SQAR sample, initial weight used not the target weight

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Stantec Consulting Corp. Job ID: 410-26291-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015C TPH	3546	Solid	>C12-C22 (1C)
8015C TPH	3546	Solid	>C22-C44 (1C)
Moisture		Solid	Percent Moisture
Total TPH		Solid	Total Reported TPH

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-26447-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-26447-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-26447-1

Revision
The report being provided is a revision of the original report sent on 1/29/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/14/2021 5:04 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.1°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-26586-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

HPLC/IC

Qualifier	Qualifier Description
E	Result exceeded calibration range.
FL	MS and/or MSD recovery below control limits.

Metals

Qualifier	Qualifier Description
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-26586-1

Narrative

Job Narrative
410-26586-1

Revision
The report being provided is a revision of the original report sent on 2/8/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/15/2021 3:49 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.0°C

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with 410-86525 is compliant under 8260C criteria for t-Butyl alcohol. The software does not display the data to the whole number as is listed in the method (i.e. limit of 20%). When applying the evaluation to a whole number, the QC passes the criteria.

Method 8260C: The method blank for analytical batch 410-86525 contained C4-C12-TPH-GRO above the method detection limit (MDL). Associated samples were not re-analyzed due to insufficient sample volume; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: The following sample was analyzed outside of analytical holding time due to received out of holding time : TB-20210115 (410-26586-2).

Method 8011: The 1,1,2,2-Tetrachloroethane (Surr) surrogate recovery for the following samples was outside acceptance limits (high biased) on the confirmation column due to matrix interference: BT-17A-W-40-20210114 (410-26586-1). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020A: The following sample was not filtered within 15 minutes of sample collection as required by the method: BT-17A-W-40-20210114 (410-26586-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Client: Stantec Consulting Corp. Job ID: 410-27011-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
H3	Sample was received and analyzed past holding time.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
FL	MS and/or MSD recovery below control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-27011-1

Revision
The report being provided is a revision of the original report sent on 2/5/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/20/2021 4:42 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.1°C

Receipt Exceptions
One or more containers for the following sample was received broken or leaking: BT17A-W-73-20200119 BT-17A-W-73-20210119 (410-27011-1). One VOA Vial 40ml - Hydrochloric Acid

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 410-88275 recovered above the upper control limit for t-Butyl alcohol. Non-detections of the affected analytes are reported. Any detections are considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
Method RSK_175: The following sample(s) was received outside of the holding time. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: TB-20210119 (410-27011-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015C_TPH: Surrogate recovery for the following sample was outside control limits: BT-17A-W-73-20210119 (410-27011-1). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results.The results of the re-extract were 4.2 mg/L for the C12-C22 range and 0.23 mg/L for the >C22-C44 range.

Method 8015C_TPH: Surrogate recovery for the following sample was outside acceptance limits: BT-17A-S-79-20210119 (410-27011-3). The results have been reported per client request as sample could not be re-extracted within hold time.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020A: The following sample was not filtered within 15 minutes of sample collection as required by the method: BT-17A-W-73-20210119 (410-27011-1). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job ID: 410-27011-1 (Continued)

Laboratory: Eurofins Lancaster Laboratories Env, LLC (Conti

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Stantec Consulting Corp.
Project/Site: PHL Belmont Terminal Drilling Sampling

Job ID: 410-27011-1

Client Sample ID: BT-17A-W-73-20210119 — Lab Sample ID: 410-27011-1

Accreditation/Certification Summary

Client: Stantec Consulting Corp. Job ID: 410-27011-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015C TPH	3510C	Water	>C12-C22 (1C)
8015C TPH	3510C	Water	>C22-C44 (1C)
8015C TPH	3546	Solid	>C12-C22 (1C)
8015C TPH	3546	Solid	>C22-C44 (1C)
Moisture		Solid	Percent Moisture
Total TPH		Solid	Total Reported TPH
Total TPH		Water	Total Reported TPH

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-27204-1
Project/Site: PHL: Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC Semi VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
S1+	Surrogate recovery exceeds control limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-27204-1

Revision
The report being provided is a revision of the original report sent on 2/10/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/21/2021 4:37 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.8°C

GC/MS VOA
Method 8260C: Reanalysis of the following sample was performed outside of the analytical holding time: BT-18A-S-26-20210121 (410-27204-4).

Method 8260C: Internal standard (ISTD) response for the following sample was outside control limits: BT-21-S-15-20210121 (410-27204-3). The sample(s) was re-extracted and/or re-analyzed outside of holding time and ISTD response was within control limits. Surrogate recoveries were also outside of specification, but matrix effect was confirmed in the re-analysis.

Method 8260C: The following sample (initial and re-analysis) was analyzed outside of analytical holding time: BT-18A-S-10-20210120 (410-27204-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: Surrogate recovery for the following sample was outside control limits: BT-18A-S-10-20210120 (410-27204-1). Re-extraction and/or re-analysis was performed outside of holding time with acceptable results.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-27301-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time

GC Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

HPLC/IC

Qualifier	Qualifier Description
FH	MS and/or MSD recovery above control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-27301-1

Revision
The report being provided is a revision of the original report sent on 2/9/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/22/2021 3:27 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.1°C and 4.9°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270D: The following sample was diluted due to the nature of the sample matrix: BT-18A-S-49-20210122 (410-27301-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
Method RSK_175: The following sample(s) was received with less than 2 days remaining on the holding time or less than one shift (8 hours) remaining on a test with a holding time of 48 hours or less. As such, the laboratory had insufficient time remaining to perform the analysis within holding time: TB-20210122 (410-27301-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
Method 8015C_TPH: Chlorobenzene (Surr) recovery for the following sample was outside control limits: BT-18A-W-38-20210121 (410-27301-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015C_TPH: Surrogate recovery for the following sample was outside acceptance limits: BT-18A-S-49-20210122 (410-27301-3). The results have been reported per client request.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020A: The following samples were not filtered within 15 minutes of sample collection as required by the method: BT-18A-W-38-20210121 (410-27301-1) and EB-20210122 (410-27301-4). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM4500NH3_C_Mod: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: BT-18A-W-38-20210121 (410-27301-1) and EB-20210122 (410-27301-4).

Job ID: 410-27301-1 (Continued)

Laboratory: Eurofins Lancaster Laboratories Env, LLC (Conti

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Stantec Consulting Corp. Job ID: 410-27301-1
Project/Site: PHL Belmont Terminal Drilling Sampling

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Pennsylvania	NELAP	36-00037	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015C TPH	3510C	Water	>C12-C22 (1C)
8015C TPH	3510C	Water	>C22-C44 (1C)
8015C TPH	3546	Solid	>C12-C22 (1C)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Stantec Consulting Corp. Job ID: 410-27600-1
Project/Site: PHL: Belmont Terminal Drilling Sampling

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
FH	MS and/or MSD recovery above control limits.

GC Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Stantec Consulting Corp. Job ID: 410-27600-1

Narrative

Job Narrative
410-27600-1

Revision
The report being provided is a revision of the original report sent on 2/12/2021. The report (revision 1) is being revised due to: TPH Carbon range updated to >C12-C22.

Receipt
The samples were received on 1/26/2021 4:53 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.7°C

GC/MS VOA
Method 8260C: The following volatiles sample was diluted due to foaming at the time of purging during the original sample analysis: BT-18B-S-26-20210126 (410-27600-3). Elevated reporting limits (RLs) are provided.

Method 8260C: Reanalysis of the following sample was performed outside of the analytical holding time due to laboratory error : BT-18B-S-11-20210126 (410-27600-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
